Title :	Carbon Footprint – Product Category Rules (PCR) for Cork Stoppers		
Scope :	The cork stoppers covered by the scope of this document are cork stoppers as defined in ISO 633, Cork — Vocabulary, including natural cork stoppers, agglomerated cork stoppers,		

micro-agglomerated cork stoppers, multi-piece cork stoppers, 1+1 cork stoppers, and any other stoppers defined as cork stoppers. This document is applicable to the calculation of the carbon footprint (CFP) of cork stoppers from cork oak forest management through to the end-of-life stage of the stopper.

This document establishes the principles, requirements and guidelines for the Product Category Rules (PCR) for cork stoppers within the framework of a Type III environmental declaration or a carbon footprint communication programme based on life cycle assessment (LCA) in accordance with ISO 14067. It also provides guidance on how to address and integrate additional environmental information, whether or not it is based on an LCA, in a consistent and scientifically sound manner in accordance with ISO 14025.

Title :	Energy performance of buildings - Determination method		
Scope :	The new calculation method succeeds NTA 8800 and stems from the European EPBD IV directive. Its aim is to provide a transparent, unambiguous, and European-harmonized method for assessing building energy performance that better reflects actual energy use. The method applies to all building types-single-family homes, residential complexes, and non-residential buildings-whether new or existing, and covers both energy labeling and requirements for new construction. It provides a more realistic picture of actual energy consumption by better aligning with average building usage, employing a different calculation for system efficiency, and accounting for future climate trends.

Title :	Procedures for the regulatory inspection. Low voltage electrical installations. Part 1-1: Sampling procedure		
Scope :	The object of this standard is to describe the procedure to be followed by the authorised inspector when carrying out the initial and periodic inspections required by current regulations or ordered by the Competent Authority, in order to verify that low-voltage electrical installations comply with regulatory requirements.		

The following procedure applies to initial and periodic inspections of low-voltage electrical installations, as well as any extensions and modifications thereto, as set out in the Low-Voltage Electrotechnical Regulations approved by Royal Decree 842/2002 of 2 August 2002 and amended by Royal Decree 1053/2014 of 12 December 2014.

The object of this Part 1-1 is to provide a sampling method to be applied by the Inspection Bodies during statutory inspections of low-voltage electrical installations, in order to verify the operation of parts thereof, when they incorporate a large number of equivalent component.

This method is supplementary to the individual checks carried out on the basic operation (works/does not work, measurements and others) of each piece of equipment subject to inspection, which must be carried out in accordance with the provisions set out in the subsequent parts of the UNE 192007 series of standards.

Title :

Procedures for the regulatory inspection. Low voltage electrical installations. Part 2-52: Installations for the recharge of electric vehicles

Scope :

The object of this Part 2 is to provide a specific inspection procedure applicable to low-voltage electrical installations in electric vehicle charging facilities.

Electric vehicle charging facilities may be located in premises or sites whose electrical installations may be subject to specific ITC-BT regulations under the 2002 REBT, such as dwellings, garages, etc. For such installations, the relevant parts of the UNE 192007 series of standards must also be used and, where applicable, the most restrictive requirements must be applied.

Electric vehicle charging installations may also be located outdoors, in which case the UNE 192007-2-30 standard must also be used and the most restrictive requirements applied.

Title : Precast concrete elements for funerary structures
Scope : This standard specifies the requirements applicable to precast concrete elements used in funerary structures intended to accommodate coffins, funeral urns, human remains (either bodies or skeletal remains) or cremated remains (ashes), as well as the remains of domestic animals where permitted by the applicable legislation. The following elements are included, among others:– niches;– burial vaults or underground burial units;– graves;– columbaria;– ossuaries;– mausoleums;– other prefabricated funerary construction systems. This standard also applies to complementary precast concrete elements associated with such structures, including:– closing slabs or cover slabs;– base slabs;– cornices;– roof elements;– side panels;– ventilation or passive ventilation elements. This standard specifies:– the design requirements for precast concrete elements;– the criteria for the assessment and verification of constancy of performance (AVCP);– the requirements for product marking and identification;– the

technical documentation to be provided by the manufacturer;– the conditions for supply and acceptance;– the basic instructions for installation. This standard does not replace the structural design of the funerary structure where such a design is required by the applicable regulations.

Title : Softwood bark and wood chips. Phytosanitary heat treatment for the elimination of the pinewood nematode (*Bursaphelenchus xylophilus*) and other harmful organisms.
Scope : This standard sets out the procedures for heat treatment to eliminate the pine wood nematode (PWN), *Bursaphelenchus xylophilus*, and other harmful organisms, in particular its insect vector, from the bark and wood chips of coniferous species. It also sets out the conditions that must be met for the issue of the necessary legal documents certifying the effectiveness of the treatment of bark and wood chips, which the National Plant Protection Organisation (ONPP) issues to economic operators.
 The procedures set out in this standard apply to the treatment of screened bark or wood chips with a size of 5 mm or greater.

Title :	Liquid petroleum products - Spectrophotometric methods for determination of the red and blue dye and the marker Solvent Yellow 124 for light fuel oils and diesel fuels		
Scope :	In this standard are given methods for determining Solvent Red 164 and red dye in conversion to Solvent Red 19 in a light fuel oil and diesel oil; Solvent Blue 35 in a light fuel oil and diesel oil used as a marine fuel, the marker Solvent Yellow 124 in a light fuel oil and a		

diesel oil, which can be used as a marine fuel also for the concentration range:

- Method A - determination of red dye in conversion to Solvent Red 19 and marker Solvent Yellow 124 from 1,0 mg/l to 15,0 mg/l.
- Method B - determination of the Solvent Red 164 dye from 1,0 mg/l to 15,0 mg/l;
- Method C - determination of the Solvent Blue 35 dye from 1,0 mg/l to 15,0 mg/l.

Standard methods for the determination of red dyes given in this standard can not be used to identify them. Before performing the determination, it must be known the type of red dye used in product under test.

Title :	Water supply - Requirements for systems and components outside buildings - Additional specifications concerning ÖNORM EN 805
Scope :	This document is to be applied, in addition to ÖNORM EN 805, for the planning, construction, and testing of feeder, distribution, and service pipes of water distribution systems and their components located outside of buildings. The present document contains all aspects that are generally to be taken into account. Specific individual cases, such as remote connected consumer installations, are not covered in this document. This document regulates the requirements not covered by ÖNORM EN 805 concerning service pipes as well as the entire scope from the point of building entry to the transfer point to the consumer. From this transfer point onward, pipeline sections within the building are governed by ÖNORM EN 806 (all parts) and are therefore not the subject of this document. Also not covered by this document are buried pipes outside of buildings that, by function, are considered consumer pipes in accordance with ÖNORM EN 806 (all parts). For these pipes, the provisions of ÖNORM EN 806 (all parts) and ÖNORM B 2531 apply. This document may also be applied to other water supply systems (e.g., for non-potable water), although additional requirements may be necessary that are not covered by this document.

Title :	Control of electrostatic hazards in the presence of explosive atmospheres. Operating procedures. Part 2: Loading of bulk solid products into vessels containing flammable liquids		
Scope :	The project aims to revise and update UNE 109101-2:1995 IN in order to establish safety criteria and protective measures for the control of electrostatic hazards associated with the loading of bulk solid products into vessels containing flammable liquids, where explosive atmospheres may be formed by flammable vapours, dust/air mixtures or hybrid mixtures. The document will cover, among other aspects, loading into open, closed and inerted vessels; generation, accumulation and dissipation of electrostatic charges; earthing and bonding of equipment, accessories and personnel; selection of materials and loading devices; operating conditions, inerting, venting and explosion protection; and criteria applicable to industrial mixing and chemical manufacturing processes. The revision is intended to complement the recently developed national standard for liquid transfer operations, providing a consistent technical framework for the control of electrostatic hazards in operations involving flammable liquids and combined solid/liquid operations.

Title :	Methodology for verification and inspection of low voltage electrical installations at communal facilities.		
Scope :	This standard is intended to provide criteria for the verification and inspection of low-voltage electrical installations in public premises: – by providing a methodology for verification/inspection; and – by providing documentation for recording the conditions and values of the verification/inspection (non-conformities observed, damage, deterioration and hazardous conditions, etc.). The results of the verifications/inspections must define the corrective actions to be taken to comply with the minimum safety requirements for this type of installation. This standard applies to all electrical installations in public premises.		

Public premises may include special-purpose premises whose electrical installations are affected by ITC-BT standards other than ITC-BT 28 (e.g. operating theatres and procedure rooms, etc.). For such installations, the relevant parts of the UNE 202009 series of standards must also be used.

Country :	Austria		
Project ID :	01053443/0001	Project	Established
ICS :	11.040.50, 35.240.80		
National Ref :	ÖNORM S 5271		
Title :	Planar scintigraphy and single photon emission computed tomography - Constancy tests of functional performance characteristics		
Scope :	The scope of application, which is currently limited to single -crystal GCs, may be adjusted to include pixelated SPECT systems. This ÖNORM applies to single -crystal gamma cameras (including gamma cameras with multiple measuring heads) used for planar scintigraphy and/or single photon emission computed tomography (SPECT). This ÖNORM contains requirements for the test equipment and computer programs to be used, as well as guidelines for performing the consistency test. The purpose of this ÖNORM is to provide simple procedures for consistency testing that can be performed by the user with the simplest possible tools. It also aims to standardize the procedures necessary for consistency testing. A prerequisite for consistency testing is reference measurements, which must be performed following an acceptance or partial acceptance test. Reference measurements and measurements for consistency testing must be performed under the same conditions and must be documented.

Title :	Asbestos containing materials - Integrity assessment of roofing and cladding containing asbestos in cement matrix		
Scope :	The standard defines the parameters that describe the potential degradation of roofing and cladding made of sheets containing asbestos in cement matrix or their tendency to release fibres, which are necessary for assessing the state of conservation of roofing and cladding		

relating to real estate assets. This assessment is carried out by the person responsible for the property in question, in order to define the actions to be taken (monitoring and/or decontamination).

Title :	Specifications for the collection of textile and footwear waste		
Scope :	This standard specifies the minimum requirements for textile waste collection activities.		

This standard is applicable to all actors involved in the collection of post-consumer textiles, namely all professionals across the textile value chain, including textile producers, importers and retailers, organisations active in the collection, sorting and recycling of textile waste, as well as other interested parties such as local authorities, legislators and the general public.

This standard applies to accessories, household textiles and other textile products falling within the scope of Extended Producer Responsibility.

This standard does not apply to furniture, footwear, workwear or personal protective equipment.

Title :	Fire safety of constructions - Part 7: Fire safety requirements for the building		
Scope :	This standard provides explanations and solutions for solving standard situations by ensuring the essential fire safety requirements set out in the Building Fire Safety Regulations and defining a minimum safety level. The suitability of special solutions can still be proven analytically provided that a minimum level of essential fire safety requirements is ensured. Standard EVS 812-7 does not fully address building requirements for buildings and fire protection installations that are already covered by a standard, technical specification or regulation.

Title :	Brand design and management - Requirements		
Scope :	This document provides a framework for brand design and management, dividing the process into evolutionary phases to foster a progressive increase in brand strength and value.		

It defines the requirements for each phase, addressing the need to create a brand that identifies a product, service, company, or organization, through its full development, and drawing on the various disciplines and themes involved from time to time, from a multidisciplinary perspective.

Compliance with the requirements expressed in this document demonstrates the status achieved by the brand in its evolutionary journey, as well as the ability of the company, organization, or other entity to manage the brand and brand communications consistently with its stated purposes.

This document complements the principles expressed in UNI ISO 20671-1:2024 "Brand enhancement - Part 1: Principles and foundations."
