The freezing capacity of the freezer vessel that caught and froze tuna at -18 °C in brine, should be identified during their approval. This will facilitate official controls, by making it easier to identify</p>	24/05/2025

tuna caught and frozen by vessels that have the appropriate freezing capacity. Tuna derived from those vessels can reach different markets and not to be limited to canning industry. Moreover, Annex III, Section I, Chapter VI to Regulation (EC) No 853/2004 allows emergency slaughter outside the slaughterhouse if complying with certain requirements. Point 5 of that Chapter VI requires a declaration by the food business operator to accompany the slaughtered animal. The content of this declaration is included in the food chain information in accordance with Section III to Annex II of Regulation (EC) No 853/2004. For clarity and avoidance of possible duplication, point 5 of Chapter VI should be replaced by a reference to the food chain information. Finally, Annex III, Section XVI to Regulation (EC) No 853/2004 lays down specific requirements for highly refined products where the treatment of the raw materials eliminates any animal or public health risk. Products of animal origin authorised as food additives in accordance with Regulation (EC) No 1333/2008 of the European Parliament and of the Council are also such highly refined products and should therefore be added to this Section XVI. In addition, an alternative treatment to produce fat derivatives (Vitamin D3) is introduced since not posing an animal or public health risk.
