Draft National technical regulation on the limits of mycotoxin contamination in food.

The draft QCVN 8-1:2025/BYT replaces QCVN 8-1:2011/BYT National technical regulation on limits of mycotoxin contamination in food.

This draft National technical regulation stipulates technical requirements (Maximum permitted limits on the limits of mycotoxin contamination in food), testing methods, sampling; management requirements; and responsibilities of organizations and individuals producing and trading food.

The reference basis for reviewing and amending the regulations on mycotoxin limits in the draft QCVN is based on the provisions of the Codex General Standard for Contaminants and Toxins in Food (CODEX STAN 193-1995) updated in 2023 and EC Standard 2023/915 dated 25 April 2023 on maximum limits of certain contaminants in food replacing Regulation (EC) No 1881/2006, latest version dated 22 July 2024 and referring to other regulations on mycotoxin contamination limits in food that vary between countries around the world as follows:

- EC Standard 2023/915 dated 25 April 2023 on maximum limits for certain contaminants in food replaces Regulation (EC) No 1881/2006, the latest update dated 22 July 2024, which has changed the maximum limits for some indicators and added regulations for some food groups, such as: adding and changing the limits of Aflatoxin M1, Ochratoxin A, Zearalenone for some product groups; adding exclusions for the group of formula products for children aged 6-36 months; Additional limits for Ergot sclerotia and ergot alkaloids, T-2 and HT-2;

- The Codex general standard for contaminants and toxins in food (CODEX STAN 193-1995) 2023 update has added regulations for some product groups and maximum contamination limits for some indicators different from EU regulations.

This draft National technical regulation update testing methods: The testing methods stated in the National Technical Regulation QCVN 8-1:2011/BYT are all AOAC methods. However, the Ministry of Science and Technology has currently issued 24 Vietnamese Standards (TCVN) on testing methods for mycotoxins (with appendices attached). Referencing and citing TCVNs in QCVN will create more favourable conditions for organizations and individuals in assessing the conformity

of mycotoxin indicators with current regulations. TCVNs on testing methods for mycotoxins referred to in QCVN need to be assessed and confirmed for the validity of the testing method to be suitable for the equipment and technical capacity of testing laboratories.

This regulation applies to a) Organizations and individuals importing, producing and trading food products at risk of mycotoxin contamination; b) Relevant organizations and individuals.

Australia

Products covered include:

10/02/2025

•Australian exported processed foods and beverages, edible animal fats and oils, vitamins and supplements, animal feed and feed additives, shells, fertilisers, and human and animal remains;

•Re-exported imported goods which have not been re-processed or re-packaged in Australia.

Updates to sanitary certificates for exports from Australia of processed foods and beverages, edible animal fats and oils, vitamins and supplements, animal feed and feed additives, shells, fertilisers, and human and animal remains.

Australia is replacing the current Export Documentation System (EXDOC) with a system called the Next Export Documentation System (NEXDOC). NEXDOC is designed to make Australia's export documentation system more secure and responsive to changes in trade conditions. Australia's generic export certificate, titled Declaration and Certificate to condition, which is used for a range of goods, will soon transition to the department's NEXDOC system. This certification supports the export of processed foods and beverages, edible animal fats and oils, vitamins and supplements, animal feed and feed additives, shells, fertilisers, and human and animal remains where a model certificate is not used. In addition, Australian export documentation for the re-export of imported goods which have not been processed or repackaged in Australia will soon transition to the department's NEXDOC system. These goods are the next commodities to transition after wool, skins and hides (November 2024), fish (September 2024), eggs (December 2023), honey (2022-2023), and dairy (May 2021). The planned changes do not affect the agreed conditions or attestations for market access, bilaterally agreed information about the consignment details, or the Department of Agriculture, Fisheries and Forestry (the department) regulatory controls over exports. However, there are minor changes to formatting and the location of some of the information on the certificate. In addition, the new certificates will have unique Quick Response (QR) codes. The QR codes provide consignment specific information which border officials can use to confirm authenticity of the certificate in real-time. To verify the QR code, border officials scan the code through the official's smart phone camera.

The department proposes the new export certificates (Declaration and Certificate to condition) be issued for:

•Australian exports of processed foods and beverages, edible animal fats and oils, vitamins and supplements, animal feed and feed additives, shells, fertilisers and human and animal remains;

| | | | |
|--|-----------------------|---|------------|
| | | <p>•Australian re-exports of imported goods which have not been re-processed or re-packaged in Australia.</p> <p>This will commence from 10 February 2025, with a staged rollout until 5 May 2025. There will be a transition period where both the old and new certificates will be in use to allow for transit time (air and sea freight) to the port of destination. Australia is allowing a thirty days comment period.</p> | |

| G/SPS/N/SAU/544 07/01/2025 | Saudi Arabia, Kingdom of | <i>Poultry meat, eggs and their products</i> Notice of Administration Order of Saudi Food and Drug Authority Ref. No. 30604 dated 3 January 2025 entitled "Temporary ban on importation of poultry meat, eggs and their products originating from Calvados in France". Following the WOAHA report dated 30 December 2025, a Highly Pathogenic Avian Influenza (HPAI) virus outbreak has occurred in Calvados in France. Incompliance with the World Organisation for Animal Health (WOAH), Terrestrial Animal Health Code Chapter 10.4, it is deemed necessary for the Kingdom of Saudi Arabia to prevent the entry of the HPAI virus into the country. Therefore, the import of poultry meat, eggs and their products from Calvados in France to the Kingdom of Saudi Arabia is temporarily suspended (with the exception of processed poultry meat and egg products exposed to either heat or other treatments that ensure deactivation of the HPAI virus, as long as it conforms with the approved health requirements, and standards, with a health certificate issued by the official bodies in France prove that the product is free from the virus). | |

European
Union

Flufenacet (pesticide active substance)

Draft Commission Implementing Regulation concerning the non-renewal of the approval of the active substance flufenacet, in accordance with Regulation (EC) No 1107/2009 of the European Parliament and of the Council, and amending Commission Implementing Regulation (EU) No 540/2011 and Commission Implementing Regulation (EU) 2015/408 (Text with EEA relevance).

This draft Commission Implementing Regulation provides that the approval of the active substance flufenacet is not renewed in accordance with Regulation (EC) No 1107/2009. EU member States shall withdraw authorizations for plant protection products containing flufenacet as an active substance. The non-renewal of approval is based on the first evaluation of the substance for use as a pesticide active substance in the EU under Regulation (EC) No 1107/2009. The substance was formerly assessed and approved under Directive 91/414/EEC. In order for an active substance to be approved in accordance with Regulation (EC) No 1107/2009 (concerning the placing of plant protection products on G/TBT/N/EU/1105-2 -the market), it must be demonstrated that the substance is not harmful to human health, animal health or the environment. Criteria are listed in Article 4 of the Regulation (and also detailed in Annex II thereto) which must be met to enable approval. During the evaluation and peer-review of flufenacet, a number of concerns and areas that could not be finalized were identified. These are detailed in the statement of the European Food Safety Authority (EFSA). Flufenacet meets the criteria in points 3.6.5 and 3.8.2 of Annex II to Regulation (EC) No 1107/2009 to be identified as an endocrine disruptor for the thyroid (T)-modality for humans and non-target organisms and it has not been demonstrated that the exposure of humans and non-target organisms to that active substance in a plant protection product, under realistic proposed conditions of use, is negligible. High potential for contamination of ground water with trifluoroacetic acid was identified and that metabolite is considered to be toxicologically relevant.

The risk assessment could not be finalized with respect to the non-relevance assessment of groundwater metabolites and the risks for the consumers. These concerns mean that flufenacet does not meet the approval criteria as outlined in Regulation (EC) No 1107/2009. This decision only concerns the placing on the market of this substance and plant protection products containing it. Following non-approval and the expiry of all grace periods for stocks of products containing this substance, separate action will likely be taken on MRLs and a separate notification will be made in accordance with SPS procedures. This draft Commission Implementing Regulation was also notified under the TBT Agreement in notice G/TBT/N/EU/1105.

Kazakhstan

Live poultry and hatching eggs, down and feathers, poultry meat and all types of poultry products, feed and feed additives for birds, hunting trophies, used equipment for keeping, slaughtering and cutting birds

Letter of the Committee for Veterinary Control and Surveillance of the Ministry of Agriculture of Kazakhstan on the introduction of temporary restrictions on the importation to the territory of Kazakhstan from the territory of the States of Illinois and Arizona of the United States of America of live poultry and hatching eggs, down and feathers, poultry meat and all types of poultry products that have not undergone heat treatment, feed and feed additives for birds, hunting trophies that have not undergone taxidermy, used equipment for keeping, slaughtering and cutting birds, as well as for transit from the above territory through the territory of Kazakhstan of live birds.

The Committee for Veterinary Control and Surveillance of the Ministry of Agriculture of Kazakhstan reports that on the basis of the official notification of the World Organisation for Animal Health (WOAH) and the Animal and Plant Health Inspection Service of the United States Department of Agriculture (APHIS), an outbreak of highly pathogenic avian influenza was registered in States of Illinois and Arizona of the United States of America. In this regard, since 29 November 2024, temporary restrictions have been introduced on the importation to the territory of Kazakhstan from the territory of the States of Illinois and Arizona of the United States of America of live poultry and hatching eggs, down and feathers, poultry meat and all types of poultry products that have not undergone heat treatment (at least 70 °C), feed and feed additives for birds (except for feed additives of chemical and microbiological synthesis), hunting trophies that have not undergone taxidermy (game birds), used equipment for keeping, slaughtering and cutting birds, as well as for transit from the above territory through the territory of Kazakhstan of live birds.

1. Based on the recognition of equivalence of the exporting countries (regions)' food safety inspection systems, GACC will approve the officially recommended registration manufacturers lists in bulk as well as optimize and simplify the registration procedures;
2. Following the principle of risk management, GACC will add the Food Manufacturers List that Requires A Recommendation Letter from the Competent Authority and adjust it dynamically, while improving the registration classification and categorization management;
3. GACC will optimize the pre-registration assessment and review, the verification of registration information at border posts, the post-registration review, and problems sorting after finding them;
4. Following the principle of being prudent and pragmatic, GACC will optimize the expression of some provisions such as suspension, modification, and extension, etc. to enhance the flexibility and operability of the provisions;
5. An exemption clause will be included, which allows overseas food manufacturers of food delivered by mail or courier, food samples, or food for display, etc. to be exempted from registration.

Food preparations, n.e.s. (HS code(s): 210690); Food products in general (ICS code(s): 67.040) 11/03/2025

DUS 2245:2024, Safety of foodstuffs —Requirements, Second edition.

This Draft Uganda Standard specifies general food safety requirements for food intended for human consumption or further processing in particular, where there is no specific product standard. It provides the basic requirements to be met for a food to be passed as safe.
