Proposed GB MRLs for flupyradifurone and the metabolite DFA amending the GB MRL Statutory Register.

Flupyradifurone is an approved active substance in Great Britain. An application was received by the Health and Safety Executive to set new MRLs for various commodities. Following assessment, new MRLs have been introduced to accommodate new authorisations of a plant protection product in Great Britain. The Evaluation Report/Reasoned Opinion supporting the new MRLs is available at the following link: The evaluation of new MRLs for flupyradifurone and the metabolite DFA in or on various

commodities. A complete list of the new MRLs is available within this document, see pages 7-11 and 104-106: GB MRL publications spreadsheet - pesticides - HSE. The residue levels arising in food and feed, and in animal commodities from the notified uses result in consumer exposures below the toxicological reference values and therefore harmful effects on human health are not expected. As the residue levels exceed the current MRLs in force, new MRLs are being adopted. The MRL being set for honey is a temporary MRL; supplementary information is required and shall be submitted by: 6 March 2030.

Draft amendments to the Fifth Schedule of the Food Irradiation Regulations 2011 [P.U. (A) 143/2011]. Permitted Packaging Materials for Food to be Irradiated.

The proposed amendment to the Fifth Schedule of the Food Irradiation Regulations 2011 [P.U. (A) 143/2011] is to include four new packaging materials and their maximum permitted dose (kGy) for Permitted Packaging Materials for Food to be Irradiated. The Codex Alimentarius provides general guidelines for food irradiation but does not specify the permitted packaging materials. Meanwhile, the US Food and Drug Administration has established detailed regulations and an approved list of packaging materials for use during irradiation of pre-packaged foods. Therefore, this proposed amendment is aligned with the FDA 21 CFR Part 179, Section 179.45.
