New GB tMRLs (temporary MRLs) for mepiquat amending the GB MRL Statutory Register

Mepiquat is an approved active substance in Great Britain. The Health and Safety Executive received an application to reassess the temporary Maximum Residue Levels (tMRLs) for mepiquat residues in cultivated fungi, including oyster mushrooms. For oyster mushrooms the monitoring data supports raising the tMRL from 0.7 mg/kg to 3 mg/kg. The evaluation concludes that the existing tMRL of 0.09 mg/kg remains appropriate for all other cultivated fungi except oyster mushrooms. The Evaluation Report/ Reasoned Opinion supporting the new tMRLs is available at the following link along with a complete list of the new tMRLs: The evaluation of supplementary information to support the tMRL for mepiquat in or on cultivated fungiThe residue levels arising in food from the notified uses result in consumer exposures below the toxicological reference values and therefore harmful effects on human health are not expected. As the residue levels exceed the current tMRL in force, a new tMRL is being adopted. This revised tMRL must be reviewed in seven years, with updated monitoring data submitted to confirm it's continued validity.

New GB MRL for mandipropamid amending the GB MRL Statutory Register

Mandipropamid is an approved active substance in Great Britain. The Health and Safety Executive received an application to set a new MRL for mandipropamid in radish leaves. Following an assessment, a new MRL has been adopted. The Evaluation Report/ Reasoned Opinion supporting the new MRL is available at the following link:The evaluation of a new MRL for mandipropamid in or on radish leaves.pdfThe residue levels arising in food from the notified uses result in consumer exposures below the toxicological reference values and therefore harmful effects on human health are not expected. As the residue level exceeds the current MRL, new MRL is being adopted.

New GB MRLs for acetamiprid amending the GB MRL Statutory Register

Acetamiprid is an approved active substance in Great Britain. The Health and Safety Executive received an application to set

new MRLs for sweet/bell peppers. Following assessment, new MRLs have been introduced to support/accommodate a new authorisation of a plant protection product in Great Britain. The supporting Evaluation Report/Reasoned Opinion is available here: [The evaluation of new MRLs for acetamiprid in or on sweet peppers bell peppers.pdf](#) The residue levels arising in food from the notified uses result in consumer exposures below the toxicological reference values and therefore harmful effects on human health are not expected. As these residue levels exceed the current MRLs, new MRLs are being adopted.

New GB MRLs for cycloxydim amending the GB MRL Statutory Register

Cycloxydim is an approved active substance in Great Britain. The Health and Safety Executive received an application to set new Maximum Residue Levels (MRLs) for Potatoes, Beetroot, Horseradish, Parsnip, Parsley roots/ Hamburg roots parsley, Radishes, Salsifies, Swedes/rutabagas, Turnips, Flowering brassica, Head brassica, Kohlrabies, Lamb's lettuce/corn salads, Roman rocket/rucola, Red mustards, Baby leaf crops, Purslanes, Chards/beet leaves, Herbs and edible flowers, except Celery leaves, Beans without pods, Lentils (fresh), and in various products of animal origin. Following the assessment, new MRLs have been introduced to set Import Tolerances. The Evaluation Report/ Reasoned Opinion supporting the new MRL[s] is available at the following link: [The evaluation of new MRLs for cycloxydim in or on various commodities](#) The residue levels arising in food from the notified uses result in consumer exposures below the toxicological reference values and therefore harmful effects on human health are not expected. Since these levels are above current MRLs, new MRLs are being adopted.
