Canada

Non-ruminants feed, pet food and fertilizer

13/09/2026

Regulations Amending Certain Regulations Relating to Harmonization of the Enhanced Feed Ban

The Canadian Food Inspection Agency (CFIA) is proposing amendments to various regulations to introduce targeted flexibility to Canada's enhanced feed ban (EFB). Canada's EFB regulations were developed almost 20 years ago and do not reflect the current epidemiological situation and the country's negligible bovine spongiform encephalopathy (BSE) risk status, as recognized by the World Organisation for Animal Health (WOAH) since 2021. The proposed amendments would allow a subset of lower risk specified risk material (SRM) defined as eligible specified risk material (ESRM) for use in non-ruminant livestock feed, fertilizer, and pet food under defined conditions. All SRM would continue to be prohibited in food and ruminant feed to ensure the safety and integrity of Canada's food supply. Updated scientific assessments indicate that allowing ESRM in non-ruminant feed, fertilizer, and pet food does not increase risks to human or animal health when existing safeguards remain in place. To enable these changes, the proposal seeks to amend the Health of Animals Regulations, the Fertilizers Regulations and the Feeds Regulations, 2024. Additional amendments to the Safe Food for Canadians Regulations (SFCR) and the Food and Drug Regulations (FDR) are also proposed as part of the measures to ensure consistency and clarity across regulatory frameworks. The amendments would align the EFB with the current epidemiological context, Canada's negligible BSE risk status while reducing red tape and regulatory burden.

Decrowned pineapples from India and Indonesia: biosecurity import requirements draft report

The draft report proposes that the importation of fresh decrowned pineapples (*Ananas comosus*), produced using commonly applied commercial practices in India and Indonesia, be permitted into Australia, subject to a range of biosecurity requirements. The draft report contains details of pests that are of biosecurity concern to Australia that are potentially associated with the importation of commercially produced fresh decrowned pineapple fruit from India or Indonesia, the risk assessments for the identified pests, and the proposed risk management measures to reduce biosecurity risks to an acceptable level.

Preparations of a kind used in animal feeding (HS code(s): 2309) 14/09/2026

Draft Commission Implementing Regulation concerning the authorisation of bitter fennel essential oil from *Foeniculum vulgare* Mill. as a feed additive for all animal species, the authorisation of sweet fennel essential oil from *Foeniculum vulgare* Mill. as a feed additive for dogs and cats and the withdrawal of sweet fennel essential oil from *Foeniculum vulgare* Mill. as a feed additive for all animal

species other than dogs and cats (Text with EEA relevance)

The draft act concerns the authorisation of two essential oils from the plant *Foeniculum vulgare* Mill. as “flavouring compound” within the scope of the EU legislation on feed additives, i.e. Regulation (EC) No. 1831/2003. The measure aims at authorising bitter fennel essential oil for all animal species and sweet fennel essential oil for dogs and cats and to withdraw the placing on the market of sweet fennel essential oil for all animal species other than dogs and cats, due to the withdrawal by the applicant of a submitted application for re-authorisation. This measure is required by the regime set out in Article 10 of Regulation (EC) No 1831/2003 with regard to the status of 'existing products', i.e. additives which were allowed under the previous Directive 70/524/EEC. Transitional periods are laid down for the interested parties to prepare themselves to meet the requirement concerning the new authorisation and withdrawal from the market of the concerned products.
