G/SPS/N/CAN/1452 22/08/2022	Canada	<i>Grape seed extract (oligomeric proanthocyanidins)</i> Health Canada's proposal to enable the use of grape seed extract (oligomeric proanthocyanidins) as a supplemental ingredient in foods. Health Canada's Food Directorate completed a detailed premarket safety assessment of grape seed extract for use as a supplemental ingredient in foods, under the Supplemented Foods regulatory framework. The results of the premarket assessment support the safety of standardized grape seed extracts based on the oligomeric proanthocyanidins content. Consequently, Health Canada intends to enable the use of grape seed extract (oligomeric proanthocyanidins) by modifying the List of Permitted Supplemental Ingredients as described in the Notice of Proposal information document. The purpose of this communication is to publicly announce the Department's intention in this regard and to provide the appropriate contact information for any inquiries or for those wishing to submit new scientific information relevant to the safety of grape seed extract (oligomeric proanthocyanidins) when used as a supplemental ingredient in foods.	29/10/2022

Monkey, rodents and non-human primates

United Arab Emirates Imposing a temporary ban on the importation of monkey, rodents and non-human primates from West African countries where the disease is endemic and neighboring and inter-related countries.

Following the WOAHP reports, an outbreak of Monkey Pox disease has occurred in the African countries. Therefore to prevent the entry of the disease into the country, the United Arab Emirates is applying a precautionary sanitary measure to prevent the risk of introducing Monkey Pox disease. These measures include:

1. Imposing a temporary ban on the import of primates (other than human) and rodents from West African countries where the disease is endemic and neighboring and inter-related countries (Benin, Cameroon, Central African Republic, Congo, Côte d'Ivoire, Democratic Republic of the Congo, Gabon, Ghana, Liberia, Nigeria, Sierra Leone, and South Sudan);

2. Continuation of the current procedure of isolating animals (primates other than human for a period of 30 days and examining them for Monkey Pox disease for primate consignments imported to the country according to the certificate forms contained in the annex to Ministerial Resolution No. 335 of 2018.

Meat and meat products from caprine animals, horse, rabbit, wild boar, game birds and venison and liver of caprine animals, horse and game birds, poultry eggs, crabs and crab-like crustaceans, milk and milk products

23/10/2022

Draft Commission Regulation (EU) amending Regulation (EC) No 1881/2006 as regards maximum levels of dioxins and dioxin-like PCBs in certain foodstuffs (Text with EEA relevance).

The draft Regulation:—establishes maximum levels for dioxins and for the sum of dioxins and dioxin-like PCBs in meat and meat products from caprine animals, horse, rabbit, wild boar, game birds and venison and liver of caprine animals, horse and game birds (foodstuffs for which no maximum level for dioxins and dioxin-like PCBs has been established in the European Union);—extends the existing maximum level for dioxins and the sum of dioxins and dioxin-like PCBs in hen eggs to all poultry eggs (except goose eggs);—changes the part of crabs and crablike crustaceans to which the maximum level for dioxins and the sum of dioxins and dioxin-like PCBs applies; and—lowers the maximum levels for dioxins and the sum of dioxins and dioxin-like PCBs in milk and dairy products.

Preparations of a kind used in animal feeding. (HS code(s): 2309)

Commission Implementing Regulation (EU) 2022/1412 of 19 August 2022 concerning the authorisation of ylang ylang essential oil from *Cananga odorata* (Lam) Hook f. & Thomson as a feed additive for all animal species (Text with EEA relevance).

Ylang ylang oil was authorised without a time limit in accordance with Directive 70/524/EEC as a feed additive for all animal species. The additive was subsequently entered in the Register of feed additives as an existing product, in accordance with Article 10(1)(b) of Regulation (EC) No 1831/2003. In accordance with Article 10(2) of Regulation (EC) No 1831/2003 in conjunction with Article 7 thereof, an application was submitted for the re-evaluation of ylang ylang essential oil from the flowers of *Cananga odorata* (Lam) Hook f. & Thomson for all animal species. The applicant requested the additive to be classified in the additive category 'sensory additives' and in the functional group 'flavouring compounds'. That application was accompanied by the particulars and documents required under Article 7(3) of Regulation (EC) No 1831/2003. The applicant requested the additive to be authorised also for use in water for drinking. However, Regulation (EC) No 1831/2003 does not allow the authorisation of flavouring compounds for use in water for drinking. Therefore, the use of ylang ylang essential oil from *Cananga odorata* (Lam) Hook f. & Thomson in water for drinking should not be allowed. The fact that ylang ylang essential oil from *Cananga odorata* (Lam) Hook f. & Thomson is not authorised for use as a flavouring in water for drinking, does not preclude its use in compound feed, which is administered via water. The substance specified in the Annex, belonging to the additive category 'sensory additives' and to the functional group 'flavouring compounds', is authorised as a feed additive in animal nutrition, subject to the conditions laid down in that Annex.

Commission Implementing Regulation (EU) 2022/1419 of 22 August 2022 concerning the authorisation of buchu leaf essential oil from Agathosmabetulina(P.J. Bergius) Pillans as a feed additive for all animal species (Text with EEA relevance).

Buchu leaves oil was authorised without a time limit in accordance with Directive 70/524/EEC as a feed additive for all animal species. That additive was subsequently entered in the Register of feed additives as an existing product, in accordance with Article 10(1)(b) of Regulation (EC) No 1831/2003. In accordance with Article 10(2) of Regulation (EC) No 1831/2003 in conjunction with Article 7 thereof, an application was submitted for the re-evaluation of an essential oil from the leaves of Agathosma betulina(P.J. Bergius) Pillans (buchu leaf essential oil) for all animal species. The applicant requested the additive to be classified in the additive category 'sensory additives' and in the functional group 'flavouring compounds'. That application was accompanied by the particulars and documents required under Article 7(3) of Regulation (EC) No 1831/2003. The applicant requested the additive to be authorised also for use in water for drinking. However, Regulation (EC) No 1831/2003 does not allow the authorisation of flavouring compounds for use in water for drinking. Therefore, the use of buchu leaf essential oil from Agathosma betulina(P.J. Bergius) Pillans in water for drinking should not be allowed. The Authority further concluded, that buchu leaf essential oil from Agathosma betulina(P.J. Bergius) Pillans is recognised to flavour food and its function in feed would be essentially the same as that in food, therefore, no further demonstration of efficacy is considered necessary. It also verified the report on the methods of analysis of the feed additive in feed submitted by the Reference Laboratory set up by Regulation (EC) No 1831/2003.

Preparations of a kind used in animal feeding (HS code(s): 2309)

Commission Implementing Regulation (EU) 2022/1420 of 22 August 2022 concerning the authorisation of L-glutamic acid and monosodium glutamate produced by Corynebacterium glutamicum NITE BP-01681 as feed additives for all animal species (Text with EEA relevance).

In accordance with Article 7 of Regulation (EC) No 1831/2003, an application was submitted for the authorisation of L-glutamic acid and monosodium glutamate produced by Corynebacterium glutamicum NITE BP-01681. That application was accompanied by the particulars and documents required under Article 7(3) of Regulation (EC) No 1831/2003. The application concerns the authorisation of L-glutamic acid and monosodium glutamate produced by Corynebacterium glutamicum NITE BP-01681 as feed additives for all animal species, to be classified in the categories 'nutritional additives' and 'sensory additives'. The applicant requested the feed additive to be authorised for use also in water for drinking. However, Regulation (EC) No 1831/2003 does not allow the authorisation of 'flavouring compounds' for use in water for drinking. Therefore, the use of

monosodium glutamate produced by *Corynebacterium glutamicum* KCCM 80188 in water for drinking should not be allowed. The fact that the additive is not authorised for use as a flavouring in water for drinking does not preclude its use in compound feed administered via water. The European Food Safety Authority ('the Authority') concluded in its opinion of 26 January 2022 that, under the proposed conditions of use, L-glutamic acid and monosodium glutamate produced by *Corynebacterium glutamicum* NITE BP-01681 do not have adverse effects on animal health, consumer safety or the environment. It also concluded that these substances are neither considered irritant to skin or eyes, nor dermal sensitisers, but are considered a risk by inhalation. Therefore, the Commission considers that appropriate protective measures should be taken to prevent adverse effects on human health, in particular as regards the users of the additive. The Authority also concluded that these substances have the potential to be efficacious as nutritional additives and as flavouring compounds in feeding stuffs. The Authority does not consider that there is a need for specific requirements of post-market monitoring. It also verified the report on the methods of analysis of the feed additive in feed submitted by the Reference Laboratory set up by Regulation (EC) No 1831/2003.

Preparations of a kind used in animal feeding (HS code(s): 2309)

Commission Implementing Regulation (EU) 2022/1421 of 22 August 2022 concerning the authorisation of expressed orange essential oil, distilled orange essential oil and folded orange oils from *Citrus sinensis* (L.) Osbeck as feed additives for all animal species (Text with EEA relevance). Language(s): English, French and Spanish.

Expressed orange essential oil, distilled orange essential oil and folded orange oil were authorised without a time limit in accordance with Directive 70/524/EEC as feed additives for all animal species. These additives were subsequently entered in the Register of feed additives as existing products, in accordance with Article 10(1)(b) of Regulation (EC) No 1831/2003. In accordance with Article 10(2) of Regulation (EC) No 1831/2003 in conjunction with Article 7 thereof, an application was submitted for the re-evaluation of expressed orange essential oil, distilled orange essential oil and folded orange oils from *Citrus sinensis* (L.) Osbeck for all animal species. The applicant requested the additives to be classified in the additive category 'sensory additives' and in the functional group 'flavouring compounds'. The European Food Safety Authority ('the Authority') concluded in its opinion of 29 September 2021 that, under the proposed conditions of use, expressed orange essential oil, distilled orange essential oil and folded orange oils from *Citrus sinensis* (L.) Osbeck do not have adverse effects on animal health, consumer health or the environment. The Commission considers that appropriate protective measures should be taken to prevent adverse effects on human health, in particular as regards the users of the additives. Since safety reasons do not require the immediate application of the modifications to the conditions of authorisation of the substances concerned, it is appropriate to allow a transitional period for interested parties to

prepare themselves to meet the new requirements resulting from the authorisation.

Australia

Foods in general

28/10/2022

Proposal to amend Schedule 20 of the revised Australia New Zealand Food Standards Code(23 August 2022).

This Proposal seeks to amend the Australia New Zealand Food Standards Code to align the following maximum residue limits (MRLs) for various agricultural and veterinary chemicals so that they are consistent with other national regulations relating to the safe and effective use of agricultural and veterinary chemicals:

- Buprofezin, Flupyradifurone, Fluxapyroxad, Imazapic, Imazapyr, Pyraclostrobin and Quinalofop-ethyl in specified plant commodities.
- Aminocyclopyrachlor and Amitraz in specified animal commodities.

Aditivos utilizados en los alimentos

Propuesta de Modificación al Reglamento Sanitario de los Alimentos (RSA)DS977/96, Título III de los Aditivos Alimentarios y Norma Técnica de Aditivos Alimentarios.

Esta propuesta ha sido elaborada por el Grupo de Trabajo Asesor en Materia de Aditivos Alimentarios (3 de febrero de 2021, Decreto Exento No. 08, Ministerio de Salud). Para su elaboración se ha establecido un "Sistema de Clasificación de Alimentos" basado en los principios del Codex Alimentarius, adaptando algunos de sus títulos, definiciones y ejemplos a la realidad nacional y puntualmente a lo establecido en el DS 977/96, con el fin de permitir usos de aditivos alimentarios en cada categoría de alimentos. Esta propuesta está basada en el Codex Stan 192, ordenando los aditivos con límites por categorías de alimentos, estableciendo para cada uno la funcionalidad. Los descriptores de las categorías de alimentos establecidos en la Norma Técnica de Aditivos Alimentarios no tienen como fin ser denominaciones legales de los productos para el etiquetado; sino que sirven para validar los aditivos y límites que están permitidos en ellos. Así mismo, el Sistema de Clasificación de Alimentos es de carácter jerárquico, lo que significa que cuando se reconoce el uso de un aditivo en una categoría general, se reconoce dicho uso en todas sus subcategorías, a menos que se indique otra cosa. Para mayor detalle revisar el documento adjunto a esta notificación. En el caso de tener comentarios, se solicita que estos sean enviados en formato Word, estilo tabla de comentarios, con las siguientes tres columnas:
