Food and feed, animal health and welfare, plant health and plant protection products

22/11/2025

Draft law "On official controls and other official activities performed to ensure the application of rules on food and feed, animal health and welfare, plant health and plant protection products in the Republic of Albania".

The draft law aims to sets out the general and specific rules, principles, and requirements related to official controls and other official activities, and it defines the responsibilities, financing, and procedures for carrying out official controls. Its overarching purpose is to guarantee a high level of protection for human health, animal health and welfare, and plant health, while also safeguarding the environment and consumer interests. The draft law provides a comprehensive legal framework for the performance of official controls and other official activities, which are essential to verify compliance with national legislation throughout all stages of food and feed production and distribution, including rules related to organic production, animal welfare, plant health, and geographical indications. To achieve its objectives, the draft law establishes a harmonized and integrated system of official controls conducted by designated competent authorities. These authorities are required to be adequately resourced, trained, and supervised to ensure the effectiveness, impartiality, and consistency of controls. The draft law introduces multi-annual national control plans, which must be regularly updated and cover all relevant sectors of the agri-food chain. These plans allow for a risk-based approach, ensuring that resources are focused where they are most needed. Furthermore, the draft law foresees the use of a computerized information management system, enabling efficient exchange of data and coordination among the competent authorities and with the European Commission before day of accession. In cases of non-compliance or serious risk, the regulation outlines clear enforcement mechanisms, including immediate corrective actions and sanctions. Through these

		mechanisms, draft law establishes a strong and coherent system that enhances transparency, strengthens trust in the Albanian food safety and regulatory systems, and ensures that consumers across the country are equally protected. The draft law "On official controls and other official activities performed to ensure the application of rules on food and feed, animal health and welfare, plant health and plant protection products in the Republic of Albania" is approximation of the Regulation (EU) 2017/625.	
G/SPS/N/CAN/1613 23/09/2025	Canada	<i>Susceptible species of aquatic animals</i> Proposed amendments to the Susceptible Species of Aquatic Animals List. Canada is seeking comments on the Susceptible Species of Aquatic Animals List (SSL) to add or remove species as well as change the diseases of concern associated with species currently on the SSL. These updates are to align with changes to the species listed in the disease specific chapters of the World Organisation for Animal Health (WOAH) Aquatic Animal Health Code. Import permit and zoosanitary export certification may be required for export to Canada of species on the SSL. Therefore, it is the responsibility of the certifying official in the exporting country to refer to Canada's SSL to review the diseases of concern for the species presented for export to ensure Canadian requirements can be met.	18/11/2025
