Isopyrazam (pesticide active substance)

Draft Commission Implementing Regulation withdrawing the approval of the active substance isopyrazam in accordance with Regulation (EC) No 1107/2009 of the European Parliament and of the Council concerning the placing of plant protection products on the market, amending Commission Implementing Regulation (EU) No 540/2011 and repealing Implementing Regulation (EU) No 1037/2012

G/SPS/N/EU/516 This draft Commission Implementing Regulation provides that the approval of the active substance isopyrazam is withdrawn in accordance with Regulation (EC) No 1107/2009. Member States shall withdraw authorisations for plant protection products containing isopyrazam as an active substance. In order for an active substance to be approved in accordance with Regulation (EC) No 1107/2009 (concerning the placing of plant protection products on the market), it must be demonstrated that the substance is not harmful to human health, animal health or the environment. Criteria are listed in Article 4 of the Regulation (and also detailed in Annex II thereto) which must be met to enable approval. Active substances may be reviewed at any time where in the light of new scientific and technical knowledge there are indications that the substance no longer satisfies the approval criteria laid down in Article 4 of Regulation (EC) No 1107/2009. Substances that are or have to be classified as toxic for reproduction category 1B (R1B) according to Regulation (EC) No 1272/2008 cannot be approved unless exposure to humans is demonstrated to be negligible under realistic conditions of use. In December 2020, the ECHA Committee for Risk Assessment concluded that isopyrazam meets the criteria to be classified as R1B. Negligible exposure is not demonstrated since residues are expected in crops (therefore there is no negligible exposure demonstrated for consumers). This means that isopyrazam no longer fulfils the approval criteria as outlined in Regulation (EC) No 1107/2009 and the approval should therefore be withdrawn. Existing authorisations will need to be withdrawn; Member States must withdraw existing plant protection

products containing isopyrazam at the latest by three months from the date of entry into force. A period of grace in line with Article 46 of Regulation 1107/2009 is allowed for and shall expire at the latest six months from the entry into force. This decision only concerns the placing on the market of this substance and plant protection products containing it. Following withdrawal of approval and the expiry of all grace periods for stocks of products containing this substance, separate action may be taken on MRLs and a separate notification will be made in accordance with SPS procedures. This draft Commission Implementing Regulation was also notified under the TBT Agreement in notice G/TBT/N/EU/857.

Commission Implementing Regulation (EU) 2021/2095 of 29 November 2021 concerning the authorisation of L-lysine base, L-lysine monohydrochloride and L-lysine sulphate as feed additives for all animal species (Text with EEA relevance)

G/SPS/N/EU/517 Regulation (EC) No 1831/2003 provides for the authorisation of additives for use in animal nutrition and for the grounds and procedures for granting such an authorisation. In accordance with Article 7 of Regulation (EC) No 1831/2003, applications were submitted for the authorisation of L-lysine base, L-lysine monohydrochloride and L-lysine sulphate. The applications were accompanied by the particulars and documents required under Article 7(3) of that Regulation. The applications concern the authorisation of L-lysine base and L-lysine monohydrochloride produced by *Corynebacterium glutamicum* KCCM 80183, L-lysine monohydrochloride and L-lysine sulphate produced by *Corynebacterium glutamicum* CCTCC M 2015595 and L-lysine sulphate produced by *Corynebacterium glutamicum* KCCM 80227 as feed additives for all animal species, to be classified in the additive category 'nutritional additives', functional group 'amino acids, their salts and analogues'.

Commission Implementing Regulation (EU) 2021/2092 concerning the authorisation of potassium diformate as a feed additive for pigs for fattening and weaned piglets (Text with EEA relevance)

G/SPS/N/EU/518 Regulation (EC) No 1831/2003 provides for the authorisation of additives for use in animal nutrition and for the grounds and procedures for granting such an authorisation. In accordance with Article 7 of Regulation (EC) No 1831/2003 an application was submitted for the authorisation of potassium diformate. That application was accompanied by the particulars and documents required under Article 7(3) of Regulation (EC) No 1831/2003. The application concerns the authorisation of potassium diformate as a feed additive for pigs for fattening and weaned piglets, to be classified in the

category 'technological additives'. The European Food Safety Authority ('the Authority') concluded in its opinion of 5 May 2021 that, under the proposed conditions of use, potassium diformate does not have adverse effects on animal health, consumer safety or the environment. It also concluded that the substance does not raise concerns regarding the effects on the respiratory system and the skin but is an eye irritant. Therefore, the Commission considers that appropriate protective measures should be taken to prevent adverse effects on human health, in particular as regards the users of the additive. The Authority also concluded that the substance has the potential to be efficacious as a technological additive in feedingstuffs. It also verified the report on the methods of analysis of the feed additive in feed submitted by the Reference Laboratory set up by Regulation (EC) No 1831/2003.

Certificado Fitosanitario

G/SPS/N/PAN/72 Con el propósito de prevenir interrupciones al comercio, Panamá notifica a sus socios comerciales que utiliza el Sistema Genérico (GeNS) de la solución ePhyto de la Convención Internacional de Protección Fitosanitaria (CIPF) para generar y transmitir Certificados Fitosanitarios electrónicos a los países con los cuales se formalice este medio de comunicación. Para aquellos países con los que no se haya formalizado la transmisión electrónica de Certificados Fitosanitarios o no estén conectados a la solución ePhyto, Panamá utilizará el Sistema GeNS de ePhyto de la CIPF para emitir certificados fitosanitarios en papel, que serán presentados por la parte interesada a la Organización Nacional de Protección Fitosanitaria (ONPF) del país importador en el punto de entrada. La DNSV desea resaltar que los Certificados fitosanitarios producidos en GeNS cuentan con un código QR, que permite la trazabilidad y verificación de su autenticidad. De igual forma, estos certificados cumplen con la NIMF 12 de la CIPF. Se incluye una muestra del Certificado Fitosanitario en papel generado en GeNS. La emisión de Certificados Fitosanitarios en papel generados en GeNS entrará en vigor a partir del 1 de enero de 2022. Esta implementación será progresiva durante el año 2022, en razón de lo cual el formato anterior, también adjunto, estará vigente durante este período.

Commission Implementing Regulation (EU) 2021/2090 of 25 November 2021 concerning the denial of authorisation of titanium dioxide as a feed additive for all animal species (Text with EEA relevance)

G/SPS/N/EU/519 Regulation (EC) No 1831/2003 provides for the authorisation of additives for use in animal nutrition and for the grounds and procedures for granting or denying such authorisation. Article 10 of that Regulation provides for the re-evaluation of additives authorised pursuant to Council Directive 70/524/EEC. Titanium dioxide was authorised without a time limit by Directive 70/524/EEC as a colourant additive (colouring agents authorised for colouring foodstuffs by Community rules) for cats and dogs. It was also authorised without a time limit for all animal species, with the exception of cats and dogs, for animal feedingstuffs under certain conditions. That product was subsequently entered in the Register of feed additives as an existing product, in accordance with Article 10(1) of Regulation (EC) No 1831/2003. In accordance with Article 10(2) of Regulation (EC) No 1831/2003, in conjunction with Article 7 thereof, an application was submitted for the re-evaluation of titanium dioxide as a feed additive for all animal species. The applicant requested the additive to be classified in the additive category 'sensory additives' and the functional group 'colourants: substances that add or restore colour in feedingstuffs'. The application was accompanied by the particulars and documents required under Article 7(3) of Regulation (EC) No 1831/2003. The European Food Safety Authority ('the Authority') noted in its opinion of 5 May 2021 that it could not conclude on the safety of titanium dioxide for the target species, consumers and environment, given the absence of specific data related to its use as a feed additive and considering that the genotoxicity of particles of titanium dioxide could not be ruled out, raising potential concerns on the safety of the additive for the target species (especially for long-living animals and reproductive animals), consumers and users. In the absence of studies with titanium dioxide, the Authority could not conclude on the assessment of the effects of the additive on eyes and skin. The Authority further noted that titanium dioxide is potentially carcinogenic to workers if inhaled and that, as the genotoxicity of particles of titanium dioxide cannot be ruled out, it should be considered as an additional potential concern to users handling the additive. The Authority also verified the report on the method of analysis of the feed additive in feed submitted by the Reference Laboratory set up by Regulation (EC) No 1831/2003.

Commission Implementing Regulation (EU) 2021/2093 of 29 November 2021 concerning the authorisation of disodium 5'-guanylate as a feed additive for all animal species (Text with EEA relevance)

G/SPS/N/EU/520 Regulation (EC) No 1831/2003 provides for the authorisation of additives for use in animal nutrition and for the grounds and procedures for granting such authorisation. In accordance with Article 7 of Regulation (EC) No 1831/2003 an application was submitted for the authorisation of disodium 5'-guanylate. That application was accompanied by the particulars and documents required under Article 7(3) of Regulation (EC) No 1831/2003. The application concerns the authorisation of disodium 5'-guanylate as a feed additive for all animal species, to be classified in the category 'sensory additives' and in the functional group 'flavouring compounds'. The applicant requested disodium 5'-guanylate to be authorised also for use in water for drinking. However, Regulation (EC) No 1831/2003 does not allow the authorisation of 'flavouring compounds' for use in water for drinking. Therefore, the use of disodium 5'-guanylate in water for drinking should not be allowed. The European Food Safety Authority ('the Authority') concluded in its opinion of 5 May 2021 that, under the proposed conditions of use, disodium 5'-guanylate does not have adverse effects on animal health, human health or the environment. The Authority further concluded that disodium 5'-guanylate is efficacious to contribute to the flavour of feed. The Authority also verified the report on the methods of analysis of the feed additive in feed submitted by the Reference Laboratory set up by Regulation (EC) No 1831/2003. The assessment of disodium 5'-guanylate shows that the conditions for authorisation, as provided for in Article 5 of Regulation (EC) No 1831/2003, are satisfied. Accordingly, the use of that substance should be authorised as specified in the Annex to this Regulation.

Preparation of a kind used in animal nutrition (HS Code: 2309)

Commission Implementing Regulation (EU) 2021/2080 of 26 November 2021 concerning the authorisation of L-histidine monohydrochloride monohydrate produced by fermentation with Escherichia coli NITE SD 00268 as a feed additive for all animal species except finfish (Text with EEA relevance)

G/SPS/N/EU/521 Regulation (EC) No 1831/2003 provides for the authorisation of additives for use in animal nutrition and for the grounds and procedures for granting such an authorisation. In accordance with Article 7 of Regulation (EC) No 1831/2003, an application was submitted for the authorisation of the extension of use of L-histidine monohydrochloride monohydrate produced by fermentation with Escherichia coli NITE SD 00268 as a feed additive from finfish to all animal species. That application was accompanied by the particulars and documents required under Article 7(3) of Regulation (EC) No 1831/2003. The application concerns the authorisation of the extension of use of L-histidine monohydrochloride monohydrate produced by fermentation with Escherichia coli NITE SD 00268 as a feed additive from finfish to all animal species to be classified in the additive category 'nutritional

additives', functional group 'amino acids, their salts and analogues', and in the additive category 'sensory additives', functional group 'flavouring compounds'. The European Food Safety Authority ('the Authority') concluded in its opinion of 5 May 2021 that, under the proposed conditions of use, L-histidine monohydrochloride monohydrate produced by fermentation with *Escherichia coli* NITE SD 00268 does not have an adverse effect on animal health, consumers safety or the environment. The Authority also concluded for the additive in question that it was not possible to conclude on the potential for the additive to be toxic if inhaled, an irritant to eyes or a skin sensitiser. Therefore, the Commission considers that appropriate protective measures should be taken to prevent adverse effects on human health, in particular as regards the users of the additive. The Authority also concluded that the additive is an efficacious source of the essential amino acid histidine and efficacious as a flavouring compound.

Preparation of a kind used in animal nutrition (HS Code: 2309)

Commission Implementing Regulation (EU) 2021/2076 of 26 November 2021 concerning the authorisation of L-tryptophan produced by *Escherichia coli* KCCM 80210 as a feed additive for all animal species (Text with EEA relevance)
G/SPS/N/EU/522 Regulation (EC) No 1831/2003 provides for the authorisation of additives for use in animal nutrition and for the grounds and procedures for granting such authorisation. In accordance with Article 7 of Regulation (EC) No 1831/2003 an application was submitted for the authorisation of L-tryptophan produced by *Escherichia coli* KCCM 80210. The application was accompanied by the particulars and documents required under Article 7 of that Regulation. The application concerns the authorisation of L-tryptophan produced by *Escherichia coli* KCCM 80210 as a feed additive for all animal species, to be classified in the additive category 'nutritional additives', functional group 'amino acids, their salts and analogues'. The European Food Safety Authority ('the Authority') concluded in its opinion of 27 January 2021 that, under the proposed conditions of use, L-tryptophan produced by *Escherichia coli* KCCM 80210 does not have an adverse effect on the health of non-ruminant animals, consumer safety or the environment. To be safe for ruminants, the L-tryptophan should be protected against degradation in the rumen. The Authority stated that the additive under assessment is considered a mild eye irritant. The endotoxin activity of the additive and its dusting potential indicate a risk by inhalation. Therefore, the Commission considers that appropriate protective measures should be taken to prevent adverse effects on human health, in particular as regards the users of the additive.

Preparation of a kind used in animal nutrition (HS Code: 2309)

Commission Implementing Regulation (EU) 2021/2077 of 26 November 2021 concerning the

authorisation of L-valine produced by Corynebacterium glutamicum CGMCC 7.366 as a feed additive for all animal species (Text with EEA relevance)

G/SPS/N/EU/523 Regulation (EC) No 1831/2003 provides for the authorisation of additives for use in animal nutrition and for the grounds and procedures for granting such an authorisation. In accordance with Article 7 of Regulation (EC) No 1831/2003, an application was submitted for the authorisation of L-valine. The application was accompanied by the particulars and documents required under Article 7(3) of that Regulation. The application concerns the authorisation of L-valine produced by Corynebacterium glutamicum CGMCC 7.366 as a feed additive for all animal species, to be classified in the additive category 'nutritional additives', functional group 'amino acids, their salts and analogues'. The European Food Safety Authority ('the Authority') concluded in its opinion of 17 March 2021 that, under the proposed conditions of use, L-valine produced by Corynebacterium glutamicum CGMCC 7.366, when supplemented to diets in appropriate amounts, does not have an adverse effect on animal health, consumer safety or the environment. With respect to the safety of the user of that additive, the Authority could neither exclude a risk by inhalation, nor that L-valine might be irritant to skin or eyes, or a dermal sensitiser. Therefore, the Commission considers that appropriate protective measures should be taken to prevent adverse effects on human health, in particular as regards the users of the additive. Further, the Authority concluded that it is considered an efficacious source of the essential amino acid L-valine for animal nutrition and that in order to be efficacious in ruminants, the additive should be protected against degradation in the rumen. The Authority does not consider that there is a need for specific requirements of post-market monitoring. It also verified the reports on the method of analysis of the feed additive in feed submitted by the Reference Laboratory set up by Regulation (EC) No 1831/2003. The assessment of L-valine produced by Corynebacterium glutamicum CGMCC 7.366 shows that the conditions for authorisation, as provided for in Article 5 of Regulation (EC) No 1831/2003, are satisfied. Accordingly, the use of this substance should be authorised as specified in the Annex to this Regulation.
