G/SPS/N/CAN/1626 08/12/2025	Canada	<p><i>Caffeine and caffeine citrate (ICS Codes: 67.220.20)</i></p> <p>Modification to the List of Permitted Food Additives with Other Purposes of Use to revise the use of caffeine and caffeine citrate.</p> <p>Health Canada is lowering the maximum level of use of caffeine and caffeine citrate permitted in cola type beverages from 200 parts per million (ppm) to 150 ppm. This change results from the Department now regulating caffeine as a supplemental ingredient when it is added to carbonated water-based beverages and the total amount of caffeine from all sources is more than 150 ppm. Consequently, Health Canada will modify the List of Permitted Food Additives with Other Purposes of Use as described in the notice on 1 December 2025. These modifications will come into force on the day they are published in the list. The purpose of the notice of modification (notified document) is to publicly announce the Department's decision in this regard and to provide the appropriate contact information for those wishing to submit an inquiry or new scientific information relevant to the safety of this food additive.</p>	14/02/2026
G/SPS/N/EU/900 08/12/2025	European Union	<p><i>Plants, plant products and other objects (HS chapters: 01 (beehives), 06 (live plants), 07 (vegetables), 08 (fruits), 09 (Spices), 12 (seeds), 14 (vegetable products), 44 (wood), 46 (beehives), 84 (machinery), 87 (vehicles), 94 (prefabricated buildings of wood))</i></p> <p>Draft Commission Implementing Regulation amending Implementing Regulation (EU) 2019/2072 as regards the listing of pests and rules on the introduction into, and movement within, the Union territory of plants, plant products and other objects.</p> <p>Implementing Regulation 2019/2072 contains the list of Union quarantine pests, protected zone quarantine pests and regulated non-quarantine pests (RNQPs). Furthermore, it lays down phytosanitary import and internal movement requirements for plants, plant products and other objects that may pose a phytosanitary risk to the European Union. The draft amendment of Implementing Regulation 2019/2072 stipulates:</p> <ul style="list-style-type: none"> •Addition of new pests in the list of Union quarantine pests (<i>Agrilus bilineatus</i> (Weber), <i>Gymnandrosoma aurantianum</i> Lima and <i>Naupactus xanthographus</i> (Germar)); •Removal of certain Tephritidae species from the list of Union quarantine pests; •Deletions and revisions of the Protection Zones for <i>Erwinia amylovora</i> (Burrill) Winslow et al.; •Addition of new import and internal movement requirements; •Revision of existing import and internal movement requirements; <p>Addition/Revision in CN codes.</p>	06/02/2026
G/SPS/N/GBR/112 08/12/2025	United Kingdom	<p><i>All commodities - for reference, the full list of GB commodity codes is set out in Part 1 of the GB pesticides Maximum Residue Level Statutory Register</i></p>	

Inclusion of elemental iron in Part 4 of the GB MRL Statutory Register.

Elemental iron is an approved active substance in Great Britain (GB). An application was received by the Health and Safety Executive to include elemental iron in Part 4 of the GB Maximum Residue Limit Statutory Register (i.e. MRL exempt). Following assessment, elemental iron has been included in Part 4 of the GB MRL Statutory Register to accommodate a new authorisation of a plant protection product (PPP) in GB. The Evaluation Report/Reasoned Opinion supporting the decision is available at the following link: The evaluation of elemental iron to be exempt from MRLs in or on all edible crops

The levels of iron added to the soil from the notified use should not exceed natural background levels and are unlikely to have harmful effects on human health.

Teas (0610000) - for reference, the full list of GB commodity codes is set out in Part 1 of the GB pesticides Maximum Residue Level Statutory Register

New GB MRL for flubendiamide amending the GB MRL Statutory Register.

Flubendiamide is not an approved active substance in Great Britain. An application was received by the Health and Safety Executive to set a new Maximum Residue Level (MRL) for teas. Following assessment, the following CXL has been introduced to set an Import Tolerance: Teas (50 mg/kg) The Evaluation Report/Reasoned Opinion supporting the new MRL is available at the following link: The evaluation of a new MRL for flubendiamide in or on tea.pdf

The residue levels arising in food from the notified uses result in consumer exposures below the toxicological reference values and therefore harmful effects on human health are not expected. As the residue levels exceed the current MRL in force, a new MRL is being adopted.

Soyabeans (0401070), Coffee beans (0620000) - for reference, the full list of GB commodity codes is set out in Part 1 of the GB pesticides Maximum Residue Level Statutory Register

New GB MRLs for ethiprole amending the GB MRL Statutory Register.

Ethiprole is not an approved active substance in Great Britain. An application was received by the Health and Safety Executive to set new Maximum Residue Levels (MRLs) for soyabean and coffee beans. Following assessment, new MRLs have been introduced to set Import Tolerances for Soyabeans (0.05 mg/kg) and Coffee Beans (0.07 mg/kg). The Evaluation Report/Reasoned Opinion supporting the new MRLs is available at the following link: The evaluation of new MRLs for Ethiprole in or on soyabean and coffee

The residue levels arising in food and feed from the notified uses result in consumer exposures below the toxicological reference values and therefore harmful effects on human health are not expected. As the residue levels exceed the current MRLs in force, new MRLs are being adopted.

of GB commodity codes is set out in Part 1 of the GB pesticides Maximum Residue Level Statutory Register

New GB MRLs for mefentrifluconazole amending the GB MRL Statutory Register.

Mefentrifluconazole is an approved active substance in Great Britain. An application was received by the Health and Safety Executive to set new Maximum Residue Levels (MRLs) for citrus (grapefruits, oranges, lemons, limes, mandarins), avocados, bananas and coffee beans. Following assessment, the following MRLs have been introduced to set Import Tolerances: Grapefruits (0.5 mg/kg), Oranges (1.0 mg/kg), Lemons (1.5 mg/kg) – this CXL also applies to the GB MRL for 'others-citrus fruit', Limes (1.5 mg/kg), Mandarins (1.5 mg/kg), Avocados (1.0 mg/kg), Bananas (1.5 mg/kg), Coffee beans (0.4 mg/kg). The Evaluation Report/Reasoned Opinion supporting the new MRLs is available at the following link: The evaluation of CXLs for mefentrifluconazole in or on various commodities

The residue levels arising in food from the notified uses result in consumer exposures below the toxicological reference values and therefore harmful effects on human health are not expected. As the residue levels exceed the current MRLs in force, new MRLs are being adopted.

Türkiye

Apricot, peach (including nectarine), and plum stones (except kernels)

Import Requirements for Specific Plant Products.

According to our national legislation, products with HS Code 12.12.99.95.00.14 (apricot, peach (including nectarine) and plum stones and kernels) are required to be accompanied by a Phytosanitary Certificate for import. However, the importation of products under HS code 12.12.99.95.00.14 (excluding kernels) poses a plant health risk to Türkiye with respect to harmful organisms such as Plum pox potyvirus – Plum pox virus (PPV), Cherry leaf roll virus (CLRV), Prunus necrotic ringspot virus (PNRSV), and Prune dwarf virus (PDV). Accordingly, it is intended to prevent the introduction of harmful organisms into Türkiye and their spread to production areas. As of 10 December 2025, Türkiye will require that the phytosanitary certificate accompanying the importation of products classified under HS Code 12.12.99.95.00.14 (excluding kernels) include the

phytosanitary requirements detailed below in the additional declaration section, and that the necessary supplementary documents be provided. For the importation of the aforementioned products into Türkiye the additional declaration section of the plant health certificate issued by the NPPO of the exporting country must include the following additional information regarding the above-mentioned harmful organisms:

- Additional information confirming that the product has been collected from pest-free areas or pest-free production sites; and
- The product has been subjected to appropriate official tests and, based on laboratory analyses, has been confirmed to be free from harmful organisms.

In addition, a document or certificate demonstrating that the product has undergone post-harvest drying/processing procedures in the country of origin must be provided.

Furthermore, in the event of any suspicion regarding seed-transmissible harmful organisms such as PPV, CLRV, PNRSV, and PDV, laboratory analyses shall also be carried out upon their entry into Türkiye.

Accordingly, the products classified under the HS Code mentioned above (except kernels) shall be returned or destroyed if any of the following conditions are met: they are not accompanied by a phytosanitary certificate issued by the NPPO of the exporting country containing the required additional declaration, they do not carry a document or certificate demonstrating that they have undergone post-harvest drying/processing procedures, or they are found non-compliant as a result of the phytosanitary inspection upon entry into Türkiye.

New GB MRLs for clopyralid amending the GB MRL Statutory Register.

Clopyralid is an approved active substance in Great Britain. An application was received by the Health and Safety Executive requesting new Maximum Residue Levels (MRLs) for wheat, oat, products of animal origin and honey. Following assessment new MRLs have been introduced to set import tolerances for the commodities listed in Section 3. The Evaluation Report/Reasoned Opinion supporting the new MRLs is available at the following link: [The evaluation of new MRLs for clopyralid in or on various commodities.pdf](#) The residue levels arising in food from

		the notified uses result in consumer exposures below the toxicological reference values, and therefore harmful effects on human health are not expected. As the residue levels exceed the current MRLs in force, new MRLs are being adopted.

G/SPS/N/CAN/1627 10/12/2025	Canada	<i>Rosemary extract (ICS Codes: 67.220.20)</i> Proposal to modify the List of Permitted Preservatives to authorize the use of rosemary extract. Health Canada completed a premarket safety and efficacy assessment of a food additive submission seeking authorization for the use of rosemary extract as an antioxidant preservative in: •brownies, cookies and crackers •dehydrated potato products •noodles and pasta precooked with fat •dried and/or roasted nuts, seeds, and nut or seed spreads •unstandardized snack bars (cereal, fruit or nut bars) •savory or sweet snack foods (such as chips, kernels from soybean or other legumes, popcorn, pretzels, rice cakes) The requested maximum levels of use range from 10 ppm to 50 ppm, calculated as the sum of carnosol and carnosic acid. The results of the premarket assessment support the safety and efficacy of rosemary extract for its requested uses.	21/02/2026

Consequently, Health Canada intends to enable the use of rosemary extract by modifying the List of Permitted Preservatives and setting out specifications for this food additive in the Table of Food Additive Specifications, as described in the information document referenced above. The purpose of this document is to publicly announce Health Canada's intention in this regard and to provide the appropriate contact information for those wishing to submit comments, inquiries or new scientific information relevant to the safety of this food additive.

Japan

Live crustaceans limited to Penaeidae and Palaemonidae, and live molluscs limited to Haliotis rubra and Haliotis laevigata, and their aquatic animal products for aquaculture

08/02/2026

Revision of the Enforcement Ordinance of the Act on the Protection of Fishery Resources.

The content of the amendment:

1. Add infection with decapod iridescent virus 1 to the list of diseases subject to import quarantine for Penaeidae and Palaemonidae.

2. Add Haliotis rubra and Haliotis laevigata to the list of target animals for infection with abalone herpesvirus.

Since the above-mentioned diseases will become subject to import quarantine after the amended regulation enters into force, the exporting country and Japan will need to discuss the relevant risk management measures and establish the

		import requirements. Live crustaceans (Penaeidae and Palaemonidae), live molluscs (Haliotis rubra and Haliotis laevigata), and their aquatic animal products for aquaculture must then be accompanied by an appropriate health certificate to meet the bilaterally agreed import requirements upon importation into Japan.	
G/SPS/N/KOR/834 10/12/2025	Korea, Republic of	<i>Foods</i> Proposed Revision of the "Special Act on Imported Food Safety Control". This amendment is to clearly stipulate the revocation of the extension of the effective period of registration and rejection of import declarations if the importer, etc. extend the registration of foreign food facilities through fraud or other improper means. It also aims to revise the registration criteria for the traceability of imported health functional foods and infant formula by changing the basis from sales amount to import amount.	08/02/2026

Este documento establece los requisitos fitosanitarios de importación de planta in vitro *Salvia farinacea* procedente de Costa Rica.

1. El envío deberá estar acompañado de un Certificado Fitosanitario Oficial, que certifique que la planta in vitro ha sido inspeccionada oficialmente por la ONPF del país de origen e indicar en las declaraciones adicionales que el envío está libre de: *Xylella fastidiosa*;

2. El envío será sujeto a inspección fitosanitaria y muestreo para diagnóstico fitosanitario por inspectores de la Dirección de Cuarentena, en el Puesto de Cuarentena Agropecuario de ingreso al país, para la aplicación de la medida fitosanitaria que corresponda.

Los envíos serán sometidos a control fitosanitario por los inspectores de cuarentena vegetal del Instituto de Protección y Sanidad Agropecuaria, quienes verificarán el cumplimiento de los requisitos fitosanitarios y con base a la documentación que respalda el envío, resolverán la solicitud de autorización de importación.

Uruguay

Cerdos vivos, material genético, carne suina, subproductos y derivados suinos en estado fresco

Resolución de la Dirección General de Servicios Ganaderos No 362/2025 del 9 de diciembre de 2025 "Suspensión temporal de las importaciones procedentes de España de cerdos vivos, material genético, carne suina, subproductos y derivados suinos en estado fresco ante la confirmación de casos positivos de Peste Porcina Africana (PPA) en jabalíes silvestres y otras disposiciones".

La Resolución suspende temporalmente las importaciones procedentes de España, de cerdos vivos, material genético, carne suina, subproductos y derivados suinos en estado fresco. La medida se mantendrá vigente hasta tanto se cuente con una evaluación de riesgo sanitaria actualizada, conforme a los protocolos internacionales establecidos.

La Resolución también establece que quedan exceptuados de la presente suspensión de importaciones las mercancías seguras, que hayan tenido un tratamiento que garantice la inactivación del virus, según lo establecido en la Sección 15 Suidae, capítulos 15.1.22 y 15.1.23 del Código Sanitario para los Animales Terrestres de la Organización Mundial de Sanidad Animal (OMSA).

En el caso de las importaciones de carne suina, subproductos y derivados suinos en estado fresco, se autorizará únicamente el ingreso al territorio de la República Oriental del Uruguay, de aquellos cuya fecha de producción sea anterior al 7 de noviembre de 2025.
