G/TBT/N/USA/2191 08/04/2025	United States of America	<i>Chemical substances; Environmental protection (ICS code(s): 13.020); Production in the chemical industry (ICS code(s): 71.020); Products of the chemical industry (ICS code(s): 71.100)</i> Significant New Use Rules on Certain Chemical Substances (24-4.5e) Proposed rule - The Environmental Protection Agency (EPA) is proposing significant new use rules (SNURs) under the Toxic Substances Control Act (TSCA) for certain chemical substances that were the subject of premanufacture notices (PMNs) and are also subject to an Order issued by EPA pursuant to TSCA. The SNURs require persons who intend to manufacture (defined by statute to include import) or process any of these chemical substances for an activity that is proposed as a significant new use by this rulemaking to notify EPA at least 90 days before commencing that activity. The required notification initiates EPA's evaluation of the conditions of that use for that chemical substance. In addition, the manufacture or processing for the significant new use may not commence until EPA has conducted a review of the required notification, made an appropriate determination regarding that notification, and taken such actions as required by that determination.	05/05/2025

External Power Supplies – Consultation Regulation Impact Statement (February 2025, 114 pages) available for download at: External power supplies | EECA

The notified consultation document presents policy options to:

- Increase the Minimum Energy Performance Standards (MEPS).
- Widen the scope of external power supplies covered.
- Reference international test standards. Three MEPS levels are considered in the consultation document:
 - International Efficiency Marking Protocol (IEMP) III (current MEPS)
 - International Efficiency Marking Protocol (IEMP) VI
 - US levels, proposed International Efficiency Marking Protocol (IEMP) VII
- Widening the scope considered in the consultation document:
 - Include USB Power Delivery devices which automatically change their output voltage depending on the External Power Supply end device. The international test standards considered are:
 - EN 50563:2011+A1:2013 External a.c. - d.c. and a.c. - a.c. power supplies – Determination of no-load power and average efficiency of active modes
 - United States Code of Federal Regulations, Title 10, Part 430, Subpart B, Appendix Z Uniform Test Method for Measuring the Energy Consumption of External Power Supplies

Three-phase cage induction motors (electric motors) Motors (ICS 29.160.30)

08/06/2025

Consultation Regulation Impact Statement Three Phase Cage Induction Motors (February 2025, 60 pages) available for download at: Three phase cage induction motors | EECA

The notified consultation document presents policy options to:

- Increase the Minimum Energy Performance Standards (MEPS) to align with levels in the EU.
- Widen the scope of the regulations to cover smaller and larger motors.
- Introduce information disclosure requirements.
- Add in an additional international test Standard. Three MEPS levels and scope considered in the consultation document (using the IEC Efficiency Classes):
 1. Introduce MEPS for small motors at IE2 levels, 0.12kW (inclusive) to less than 0.75kW.
 - Increase MEPS for medium motors (already regulated) to IE3 levels, 0.75kW (inclusive) to less than 185kW.
 - Introduce MEPS for large motors at IE3 levels, 185kW (inclusive) to less than 375kW.
- 2. After a period of 2 years increase MEPS for a range of motors to IE4, 75kW (inclusive) to 200kW (inclusive) in 2, 4 and 6 pole configurations. The policy options propose introducing information requirements similar to those in EU

2019/1781, which requires certain information about the three phase electric motor to be visibly displayed on in the following places:

- technical data sheet or user manual supplied with the three phase electric motor, and
- manufacturers, importers, and authorised representative websites, and
- technical data sheet supplied with the product which contains a regulated three phase electric motor.

It is also proposed that the IEC 60034-2-1 (Edition 3):2024 Method 2-1-1B be added as a test standard to show compliance.

National Standard of the P.R.C., Safety specification for magnesium and magnesium alloys production

This document specifies the safety technical requirements for safety management, plant layout and buildings and structures, production operations, equipment and facilities, and verification methods in the process of magnesium and magnesium alloy smelting and production.

This document applies to the plant design, production, maintenance, overhaul, and other safety management of magnesium and magnesium alloy smelting enterprises.

This document does not apply to electrolytic magnesium smelting.

National Standard of the P.R.C., Safety specification of inerting for combustible dust

This document specifies the technical requirements and operational maintenance requirements of the inerting system for atmosphere inerting explosion protection or inert dust addition explosion protection in explosive dust environments, and describes the corresponding verification methods.

This document applies to the inerting technology where inerting gas is introduced into an explosive dust environment or inert dust is added for complete inerting explosion protection, and partial inerting can be performed by reference.

This document does not apply to:

- Fire extinguishment;
- Technology for controlling the formation of explosive atmospheres where the oxidizer is not oxygen;
- The use of technologies to control the concentration of combustible dust clouds below the lower explosive limit to avoid the formation of explosive environments.
