Canada

Environmental protection (ICS Code: 13.020)

28/07/2022

Proposed Prohibition of Certain Toxic Substances Regulations

The proposed Prohibition of Certain Toxic Substances Regulations, 2022 (the proposed Regulations) aim to reduce the risk of toxic substances entering the Canadian environment contributing to the protection of Canada's environment and wildlife.

The proposed Regulations would repeal and replace the Prohibition of Certain Toxic Substances Regulations, 2012 (the current Regulations), which prohibit the manufacture, use, sale, offer for sale and import of certain toxic substances and products containing them, with a limited number of exemptions.

The proposed Regulations would further restrict the manufacture, use, sale and import of the following five substances, which are regulated under the current Regulations, by removing exemptions, by making most remaining exemptions time-limited or by imposing other conditions:

- 1) Perfluorooctane sulfonate (PFOS), its salts and its precursors;
- 2) Perfluorooctanoic acid, its salts, and its precursors (PFOA);
- 3) Long-chain perfluorocarboxylic acids, their salts, and their precursors (LC-PFCAs);
- 4) Hexabromocyclododecane (HBCD); and
- 5) Polybrominated diphenyl ethers (PBDEs).

The proposed Regulations would also include concentration limits for these five substances at or below which their presence would be considered incidental. The proposed Regulations would also introduce restrictions on the manufacture, use, sale and import of:

- 6) Dechlorane Plus (DP) and
- 7) Decabromodiphenyl ethane (DBDPE).

The final screening assessments conducted in 2019 by Environment and Climate Change Canada concluded that DP and DBDPE are toxic to the environment under the Canadian Environmental Protection Act, 1999. Currently, there are no risk management instruments in place respecting preventive or control actions for DP in Canada, while there are only limited controls on DBDPE through the New Substances Notifications Regulations (Chemicals and Polymers).

Specific exemptions, such as for parts used in the automotive, aerospace, and electrical and electronic sectors, are being proposed for DP and DBDPE. These exemptions take into account socio-economic factors, the demonstrated absence of suitable alternatives, and consideration of the international context and risks to the environment, and are time-limited in most cases.

It would be possible for manufacturers or importers of HBCD, DP or DBDPE, or products containing them, to apply for a permit to continue their activities for up to three years, provided certain conditions are met. The permit applicant would be required to demonstrate that there are no technically or economically feasible alternatives, that they have taken steps to minimize any harmful effects of the substance on the environment and human health, and that they have developed a plan to comply with the proposed Regulations within three years.

The proposed Regulations would not apply to a manufactured item that is in transit through Canada, from a place outside Canada transit to another place outside Canada. The proposed Regulations also include administrative changes to simplify the regulatory text and to clarify the intent of certain sections of the current Regulations.

basic safety and essential performance of functional near-infrared spectroscopy (NIRS) equipment;

This document applies to the basic safety and essential performance of functional NIRS equipment intended to be used by themselves, or as a part of an ME system, for adjunctive diagnostic purposes. Not included within the scope of this particular standard are:

- a) the equipment, as a part of ME equipment, measures oxygen saturation of the haemoglobin in the micro vessels (capillaries, arterioles and venules);
- b) near-infrared spectroscopy (NIRS) tissue oximeter equipment, which is not intended for obtaining functional NIRS equipment output;
- c) pulse oximeter equipment, which is not intended for obtaining functional NIRS equipment output. The requirements for pulse oximeter equipment are found in YY 9706.261.
- d) frequency-domain and time-domain equipment for functional near-infrared spectroscopy may be subject to different test procedures than those defined herein.
- e) functional near-infrared spectroscopy equipment, which measure changes in the concentration of chromophores other than oxy- and deoxy-haemoglobin may be subject to different test procedures than those defined herein.

Self-rescuer for coal mine (including chemical oxygen self-rescuer and compressed oxygen self-rescuer) (HS code(s): 9020); (ICS code(s): 13.100) 17/07/2022

National Standard of the P.R.C., Self-rescuer For Coal Mine

This document stipulates the category, technical requirements, testing methods, inspection rules, marking, packing, transportation and storage of coal mine self-rescuer (including chemical oxygen self-rescuer and compressed oxygen self-rescuer). This document applies to chemical oxygen self-rescuer and compressed oxygen self-rescuer used in coal mines.

National Standard of the P.R.C., Technical Requirements of Coal Mine Compressed Air Self-rescue System;

This document stipulates the installation and maintenance requirements of coal mine compressed air self-rescue system. It also stipulates the classification, model, test methods, inspection rules, identification, and the documents with the product of the compressed air self-rescue device. This document applies to the installation and

maintenance of coal mine compressed air self-rescue system, as well as the design, manufacture, inspection and use of compressed air self-rescue device.

| | | Proposed rule; amendments -In this action, the EPA is proposing new and revised standards of performance for electric arc furnaces (EAF) and argon-oxygen decarburization (AOD) vessels in the steel industry. The EPA is proposing that EAF facilities that begin construction, reconstruction or modification after 16 May 2022 would need to comply with a particulate matter (PM) standard in the format of facility-wide PM emitted per amount of steel produced and a melt shop opacity limit of zero. The proposal would limit emissions of PM and opacity from new, modified, or reconstructed EAF and AOD vessels. In addition, we are proposing that all emission limits apply at all times; periodic compliance testing at least once every 5 years; and electronic reporting. In this action, the EPA also is proposing amendments for certain provisions in the current new source performance standards (NSPS) that apply to EAF constructed after 21 October 1974, and on or before 17 August 1983, and EAF and AOD vessels constructed after 17 August 1983, and before 16 May 2022 to clarify and refine the current provisions. | |
