Medical devices and household health supplies derived from or containing animal-derived materials and/or alcohol 13/11/2026

Draft Decree of the Head of BPJPH on the Guidelines for the Implementation of the Halal Product Assurance System for Medical Devices and Household Health Supplies

The guideline establishes requirements for the implementation of the Halal Product Assurance System (SJPH) and halal certification for medical devices and Household Health Supplies (PKRT). It covers medical devices derived from or containing animal-derived materials and/or alcohol that enter or directly contact the human body, limited to those used in religious rituals requiring purity. It also covers PKRT derived from or containing animal-derived materials that directly contact the human body during such rituals, food and beverages, or dining and kitchen utensils. The guideline aims to ensure compliance with applicable halal requirements and maintain halal status throughout the production process in accordance with SJPH criteria and relevant MUI Fatwas

DUS 5544:2026, Safety of toys — Age determination guidelines — Specification; First Edition

This Draft Uganda Standard provides an indication of the lowest age at which children start playing with toys in specific toy sub-categories. It is primarily directed to manufacturers and agencies that evaluate the compliance of toys with safety standards. This Draft Uganda Standard can be used as a reference to determine the appropriateness of toys by earliest age, for use by distributors, institutions and organizations involved with child play, as well as by paediatric institutions, teachers, other professionals that use toys in their routine activities, and consumers. The age at which children develop different abilities is unique for each individual child. This document illustrates the age ranges during which a typical child has developed certain abilities. Although age grading has safety implications, this document is not intended to

address specific safety requirements. Specific safety requirements for toys (e.g. restriction of the presence of small parts and small balls in toys intended for certain age groups, due to the choking hazard) can be found in the ISO 8124 series and in other regional toy safety standards and regulations.

**Draft Resolution of the Cabinet of Ministers of Ukraine
“On Amendments to Certain Technical Regulations
Concerning Emergencies in the European Union Internal
Market”**

The draft Resolution proposes to amend 12 technical regulations developed on the basis of EU harmonisation legislation by introducing a new section setting out procedures applicable in emergency situations following the activation by the European Commission of an emergency situation regime in the EU internal market. These procedures would allow products covered by the respective technical regulations to be placed on the market and/or put into service where such products have been manufactured in accordance with the requirements of European, international or national standards or common technical specifications additionally identified by the European Commission. In order to address potential disruptions to the functioning of the EU internal market in the event of an emergency and to ensure the rapid placing on the market of products identified by the European Commission as crisis-relevant goods, the draft Resolution also provides for priority processing by notified bodies of applications for conformity assessment of such products, as well as priority market surveillance of such products. Furthermore, the draft Resolution provides that, under certain conditions, the placing on the market or putting into service, where applicable, of products covered by the relevant technical regulations may not be restricted where an authorisation for their placing on the market and/or putting into service has been issued by the competent authority of an EU Member State and the European Commission has extended the effect of such authorisation to the territory of all EU Member States. The amendments to the technical regulations will enter into force on the date of Ukraine's accession to the European Union, but not earlier than six months after the date of official publication of the Resolution introducing these amendments.

14/10/2026

**Draft Order of the Ministry of Health of Ukraine “On
Approval of the Procedure for Quality Control of
Medicines During Wholesale and Retail Trade”**

The draft Order proposes to approve a new Procedure for quality control of medicines during wholesale and retail trade, which establishes the mechanism for conducting incoming quality control of medicines by business entities licensed to conduct wholesale and retail trade in medicinal products, as well as for state supervision (control) in the field of medicines

during their wholesale and retail trade. The draft has been developed with the aim of bringing the procedures for quality control of medicines into compliance with Law of Ukraine No. 2469-IX of 28 July 2022 “On Medicines”, updating the relevant terminology, and establishing requirements for ensuring the quality of medicines during their wholesale and retail trade. The draft Order, in particular: establishes a 5-year retention period for documents confirming the procurement, storage, transportation, trade, destruction or disposal of medicines; proposes to include medicinal products not accompanied by a package leaflet in the list of medicines prohibited from sale; establishes incoming quality control of medicines at receiving areas through visual inspection by authorized persons before a decision is made to release the respective batches for sale; establishes the procedure for sampling medicines where doubts arise as to their quality or where falsification is suspected, and for submitting such samples to the territorial bodies of Ukrpharmagency for state laboratory quality control in accordance with Article 108 of Law of Ukraine No. 2469-IX “On Medicines”; introduces, for business entities engaged in wholesale trade in medicines, a requirement to keep records of medicinal product sales in electronic and/or paper form, including the information necessary to ensure the traceability of each batch and its prompt recall, where necessary; provides for the possibility of preparing incoming quality control conclusions and maintaining records of the movement and sale of medicines in electronic form using electronic record-keeping systems with user authentication. The adoption of the draft Order will contribute to ensuring appropriate control over the quality, safety and efficacy of medicines during their wholesale and retail trade, as well as ensuring the traceability of medicinal products at the relevant stages of their circulation.

Electrical and electronic equipment

13/11/2026

Draft Law of Ukraine “On Waste Electrical and Electronic Equipment Management”

The draft Law proposes to establish organisational, technical and environmental requirements for producers and economic operators involved in the management of waste electrical and electronic equipment (WEEE), including its collection, storage, transportation, recycling, recovery and disposal. The draft Law also provides for the introduction of an extended producer responsibility (EPR) system for electrical and electronic equipment (EEE), under which producers are responsible for the entire life cycle of their products, from the manufacture of products through to the collection and treatment of waste generated as a result of their use. The draft Law proposes to establish a WEEE management system by: defining the legal, economic and organisational framework for placing electrical and electronic equipment on the market; defining the methods and procedures for producers to fulfil their obligations; improving the general characteristics of electrical and electronic equipment to facilitate the dismantling and recovery of WEEE; applying the waste management hierarchy, including waste prevention, preparation for reuse, recycling and recovery, to WEEE; establishing requirements for the collection, storage, transportation and treatment, including recycling, of WEEE; establishing minimum collection and recycling

efficiency targets for WEEE; establishing requirements for producers to take measures to raise public awareness of environmental protection, promote responsible consumption and ensure proper management of WEEE; introducing an administrative procedure for the registration of producers and extended producer responsibility organisations through the waste management information system; establishing reporting requirements through the waste management information system, which will also serve as a tool for monitoring and controlling producers' compliance with their obligations; and establishing liability for violations of legislation in the field of WEEE management.

The draft Resolution of the Cabinet of Ministers of Ukraine “On Amendments to the Procedure for State Quality Control of Medicines Imported into Ukraine”

The draft Resolution proposes to amend the Procedure for State Quality Control of Medicines Imported into Ukraine, approved by Resolution of the Cabinet of Ministers of Ukraine No. 902 of 14 September 2005. The draft Resolution provides for a temporary measure, applicable until 1 January 2027, granting an authorised person of an economic operator the right to inspect a consignment at the place where it is located to verify its compliance with the customs declaration with regard to the quantity of medicines in each batch, to carry out a visual inspection of each batch of medicines, and to submit the relevant photographic materials to the state control authority together with the application for the issuance of a conclusion on the quality of imported medicines. After that date, these provisions will automatically cease to have effect.

Draft Order of the Ministry of Economy and Environment of Ukraine “On Approval of the List of Types of Primary Packaging of Veterinary Medicinal Products Classified as Small-Size Primary Packaging Units”

The draft Order proposes to approve the List of Types of Primary Packaging of Veterinary Medicinal Products Classified as Small-Size Primary Packaging Units. The draft Order also provides that veterinary medicinal products whose primary packaging labelling does not comply with the requirements of the Order may be placed on the market until 11 April 2031, provided that: the State registration (re-registration) of the veterinary medicinal products was granted before the date of entry into force of the Order and such registration (re-registration) is valid and indefinite; as of the date of entry into force of the Order, an application for State registration (re-registration) is under consideration. In this case, the veterinary medicinal products may be placed on the market after their State registration (re-registration), provided that such registration (re-registration) is indefinite. The use of veterinary medicinal products placed on the market in accordance with the Order shall be permitted until the end of their shelf life.

Order of the Ministry of Health of Ukraine No. 740 "On Approval of the Procedure for Pharmacovigilance" of 3 June 2026

The Order of the Ministry of Health of Ukraine No. 740 of 3 June 2026 approves a new Procedure for Pharmacovigilance, developed pursuant to the Law of Ukraine No. 2469-IX of 28 July 2022 "On Medicinal Products" and taking into account recommendations for international harmonisation in the field of pharmacovigilance. The Procedure establishes: unified approaches to the establishment and maintenance of pharmacovigilance systems at the state level and by marketing authorisation holders; requirements for the Pharmacovigilance System Master File (PSMF), which is maintained by the marketing authorisation holder; minimum requirements for the pharmacovigilance quality system for the state control authority and applicants; the use of harmonised international terminology, formats and standards in accordance with European practice; updated requirements for the collection, analysis and monitoring of data on adverse reactions, including through the national pharmacovigilance database; procedures for the electronic submission of reports on adverse reactions, Periodic Safety Update Reports (PSURs) and Risk Management Plans (RMPs); requirements for post-authorisation safety studies, including the form and content of study protocols and final reports. The Order also declares invalid the Order of the Ministry of Health of Ukraine No. 898 of 27 December 2006 "On Approval of the Procedure for Pharmacovigilance".

The Measuring Instruments (Display Requirements) (Amendment and Consequential) Regulations 2026

This instrument amends the Measuring Instruments Regulations 2016 (MIR) as they apply in Great Britain (GB) to permit the use of a metrologically controlled remote display, such as a smartphone app. This will offer an alternative option to the existing requirement for an in-built physical display for active electrical energy meters (AEEMs) within certain Energy Smart Appliances (ESAs). ESAs include devices such as Electric Vehicle (EV) charge points and heat pumps.

BOS 78:2013 Unplasticized polyvinyl chloride (PVC-U) soil, waste and vent pipes and pipe fittings — Specification

This Botswana Standard specifies requirements for unplasticized poly vinyl chloride (PVC-U) pipes (including vent pipes) and pipe fittings of nominal sizes 40 mm to 160 mm intended for above-ground non-pressure applications for the conveyance of soil (human excrement or faeces) and waste water where continuous temperatures in excess of 60 °C are not encountered.

The standard specifies requirements for fittings manufactured predominantly by the injection-moulding process but does not cover fittings produced by fabrication.

The standard also gives guidance on jointing of pipes by means of solvent cement and by means of rubber joint rings.

‘temperature measuring instruments used on stationary tanks for conversion to reference conditions – temperature sensors and temperature sensors with a transducer’

07/10/2026

Metrology and measurement. Physical phenomena (ICS code: 17); (ICS code 17.200.20 - temperature measuring instruments)

**Measure of a general nature number: 0111-OOP-C105-26 - metrological and technical requirements, test methods for type approval, verification and checking:
‘temperature measuring instruments used on stationary tanks for conversion to reference conditions**

The regulation lays down the metrological and technical requirements for these specified measuring instruments, including the test methods for type approval and verification of specified measuring instruments. Temperature measuring instruments used on stationary tanks for conversion to reference conditions – temperature sensors and temperature sensors with a transducer may be placed on the market and put into service in the Czech Republic as specified measuring instruments pursuant to Act No 505/1990 on metrology, as amended. Pursuant to this Act, specified measuring instruments are instruments that are included in the list of the types of specified measuring instruments (Decree No 345/2002) and, at the same time, intended (by the manufacturer/importer) for measurements of relevance to the protection of public interests in areas of consumer protection, contractual relations, imposition of sanctions, fees, tariffs and taxes, health protection, environmental protection, occupational safety, or the protection of other public interests protected by special legislation. This is therefore a purpose similar to the one defining specified products – non-automatic measuring instruments and scales pursuant to Directives 2014/31/EU and 2014/32/EU. The requirements of this legislation do not apply to measuring instruments not placed on the market in the Czech Republic for the above purposes, defined by Act No 505/1990 on metrology, as amended.

The purpose of this notified legislation is to lay down metrological and technical requirements for these specified measuring instruments. This legislation also stipulates tests for type approval and verification of specified measuring instruments of this type. This measure of a general nature has been drawn up with a view to achieving the specified objective, whilst taking the greatest possible account of international standards and other generally accepted principles and norms.

Act No 505/1990 on metrology assumes that, for the types of specified measuring instruments listed in the Annex to Decree No 345/2002 laying down the measuring instruments subject to mandatory verification and those subject to type approval, the technical and metrological requirements, including tests for the purposes of type approval, verification and checking of specified measuring instruments, shall be specified in a measure of a general nature.

Given the intended purpose, the stipulated requirements are designed to be as minimal as possible. Moreover, from the manufacturer's point of view, they replicate the usual requirements of normative regulations for products. For manufacturers or users, the type-approval or verification process simply involves demonstrating that the relevant requirements have been met. In addition, the manufacturer does not necessarily have to undergo all the tests at the time of type-approval, if they have already been carried out. The general principle of recognition applies where the requirements are met.

14/11/2026

Proposal for Amendments to the Legal Inspection Requirements for Fuel Containers Pre-filled with Liquefied Petroleum Gas for Portable Butane Gas Stoves, Torches or General Refillable Lighters

Fuel containers pre-filled with liquefied petroleum gas for portable butane gas stoves, torches or general refillable lighters have been subject to mandatory inspection by the BSMI since 1 January 2003. The current conformity assessment procedure is Type-Approved Batch Inspection, and the applicable inspection standard is CNS 14530:2014. The labeling requirements for fuel containers for torches or general refillable lighters are prescribed in Section 9 of CNS 12951:2003. The revised CNS 14530:2023, in Section 9.6 and Annex B, introduces pressure-resistance test requirements for fuel containers for portable butane gas stoves equipped with pressure relief devices. In addition, the labeling requirements in Section 10(a) of the revised CNS 12951:2016 no longer include the requirement specified in Item (5) of Section 9 of CNS 12951:2003 concerning whether an odorant has been added, and newly require compliance with relevant regulations announced by the competent authority for the

relevant industry. Accordingly, the relevant inspection requirements are amended in accordance with the revised inspection standards.

Medium-chain chlorinated paraffins: "Medium-chain chlorinated paraffins (MCCPs)" means substances that contain either or both of the following: Linear chloroalkanes with carbon chain lengths in the range C14–17 and chlorination levels at or exceeding 45% chlorine by weight: linear C14–17 chloroalkanes of the molecular formula C14H(30–y)Cly (where y ≥ 5), C15H(32–y)Cly (where y ≥ 5), C16H(34–y)Cly (where y ≥ 6), or C17H(36–y)Cly (where y ≥ 6) Unintentional trace contaminants of medium-chain chlorinated paraffins

(MCCPs) in products or articles are persistent organic pollutants if the total concentration of linear C14–17 chloroalkanes, of any of the molecular formulae in paragraph (b) of the above definition, in substances in those products or articles is greater than 3% by weight. MCCPs are used in a wide range of applications, mainly as a secondary plasticiser and flame retardant in polyvinyl chloride (PVC), as extreme pressure additives in metalworking fluids, and as additives to paints, adhesives, sealants, rubbers and other polymeric materials. Long-chain perfluorocarboxylic acids, their salts, and related compounds: “Long-chain perfluorocarboxylic acids” or “their salts” means a homologous series of substances with the molecular formula of $C_nF_{2n+1}COOH$ (where $8 \leq n \leq 20$). “Related compounds” means any substance that is a precursor and may transform to long-chain perfluorocarboxylic acids, where the perfluorinated alkyl moiety—has the formula C_nF_{2n+1} (where $8 \leq n \leq 20$); and is directly bonded to any chemical moiety other than a fluorine, chlorine, or bromine atom. “Long-chain perfluorocarboxylic acids, their salts, and related compounds” does not include perfluorooctanoic acid (PFOA), its salts, and PFOA-related compounds as listed in this Schedule. LC-PFCAs are used in a wide range of applications, including industrial uses, electronic articles, medical and laboratory devices, food contact materials, paints, fire-fighting foams, personal care products and the automotive industry.

Hazardous Substances and New Organisms Act 1996, 295 pages, English, <https://www.legislation.govt.nz/act/public/1996/30/en/latest/#DLM381222> Imports and Exports (Restrictions) Prohibition Order (No 2) 2004, 30 pages, English, <https://www.legislation.govt.nz>

New Zealand has amended Schedules 1AA and 2A of the Hazardous Substances and New Organisms Act 1996 and Schedule 1 of the Imports and Exports (Restrictions) Prohibition Order (No 2) 2004 to implement decisions made by the 2025 Conference of the Parties under the Stockholm Convention on Persistent Organic Pollutants, to which New Zealand is a Party. New Zealand has prohibited from use and production two chemicals, MCCPs (plasticiser and flame retardant) and LC-PFCAs (PFAS with a number of applications, including surface treatments and consumer products). These prohibitions are subject to some specific exemptions allowing the continued use of the substances, aligning with the specific use exemptions available under the Stockholm Convention. All exemptions are time-limited and are set out in detail in the accompanying statutory instrument.

Local Space Heaters, External Power Supplies, Commercial Deep Fryers 16/11/2026

Draft revision of the ordinance on energy efficiency

As part of the present revision of the Energy Efficiency Ordinance of November 1, 2017 (EnEV; SR 730.02), adaptations to EU law are being made. Energy efficiency requirements are adapted to EU law in Annexes 1.18 (Local Space Heaters) and 2.2 (external power supplies). The existing exception to EU law in Annex 2.14 is being partially revised and tightened. Commercial deep fryers are now required to automatically lower the temperature when not in use.

Equipo de transporte de petróleo, de productos petrolíferos y de gas natural (Código(s) de la ICS: 75.200) 17/11/2026

Reglamento Técnico Salvadoreño RTS 75.02.04:26 DISTRIBUCIÓN DE GAS NATURAL POR REDES. DISEÑO, CONSTRUCCIÓN, OPERACIÓN, MANTENIMIENTO Y ABANDONO O DESACTIVACIÓN.

Establecer los requisitos técnicos para el diseño y construcción de la infraestructura para distribución de gas natural por redes, así como las condiciones de operación, mantenimiento, inspección y el abandono o desactivación de éstas. Se aplica únicamente a la distribución de gas natural por redes y comprende las siguientes actividades: - El diseño de las instalaciones de tuberías en redes de gas natural, hasta el límite del servicio domiciliario exterior, en su ingreso al cofre o gabinete de medición y regulación. - La construcción o reparación de redes de distribución de gas natural o ramales de alimentación instalados en la vía pública y que operen hasta una presión máxima de 4 200 kPa (42 bar). - La realización de tareas y las condiciones mínimas de seguridad en la construcción, operación y mantenimiento de sistemas de distribución de gas natural. Asimismo, se establecen los requisitos a cumplir en materia de protección del medio ambiente durante dichas tareas.

Natural mineral water and spring water

18/10/2026

Draft Order of the Ministry of Agrarian Policy and Food of Ukraine "On Amendments to the Order of the Ministry for Development of Economy, Trade and Agriculture of Ukraine No. 741 of 12 April 2021" (concerning Hygienic Requirements for the production and

The draft Order provides for amendments to the Hygienic Requirements for the Production and Circulation of Natural Mineral Waters and Spring Waters, approved by Order of the Ministry for Development of Economy, Trade and Agriculture of Ukraine No. 741 of 12 April 2021, notified in documents G/TBT/N/UKR/185 and G/TBT/N/UKR/185/Add.1.

The draft Order establishes technical requirements for the treatment of natural mineral waters and spring waters with ozone-enriched air and activated alumina, including requirements concerning the use of these treatment methods and the quality control of activated alumina.

It also establishes labelling requirements for treated natural mineral waters and spring waters, including the indication of the adsorption method used.

The draft Order has been developed based on the provisions of Commission Directive 2003/40/EC and Commission Regulation (EU) No 115/2010.

It is also notified under the SPS Agreement, as it contains measures aimed at ensuring the safety of the treatment of natural mineral waters and spring waters and preventing changes to their essential characteristics.
