G/TBT/N/AUS/202 21/09/2026	Australia	<i>Long chain perfluorocarboxylic acids (LC PFCAs), with the molecular formula of $C_nF_{2n+1}COOH$ (where $8 \leq n \leq 20$) Hydrofluorocarbons (HFCs), the molecular formula $C_nH(2n+2-x)F_x$, where $1 \leq n \leq 5$, and where a) for $n = 1$, $x = 1-3$, b) for $n = 2$, $x = 2-5$, c) for $n = 3$, $x = 2-7$, d) for $n = 4$, $x = 3-9$, e) for $n = 5$, $x = 10-11$</i> Proposed scheduling decision - Long chain perfluorocarboxylic acids (LC PFCAs) Proposed scheduling decision - Hydrofluorocarbons (HFCs) The Industrial Chemicals Environmental Management Standard (IChEMS) has been developed by all Australian governments to efficiently and effectively manage the risks of industrial chemicals to the environment, while providing consistent requirements for businesses across Australia. The IChEMS Register records standards for the environmental management of chemicals, including risk management measures for specific industrial uses. In turn, the Australian federal government and each state and territory government will enact legislation to implement the standards in their jurisdictions. The proposed standards will assign the following chemicals, and mixtures and articles containing the chemicals, to Schedule 6 of the IChEMS Register. This will prohibit their import, manufacture, use and export in Australia, with exceptions for some essential uses, unintentional trace contamination, research, environmentally sound disposal, and articles in use prior to the standards' date of entry into force. • Long chain perfluorocarboxylic acids (LC PFCAs) • Hydrofluorocarbons (HFCs) The essential uses in the proposed standards broadly align with the exceptions in the Stockholm Convention (for LC PFCAs) and the Montreal Protocol (for HFCs). Australia has opted to not include the Montreal Protocol exception for car air conditioning in the essential uses for HFCs, based on the global trend toward not allowing this exception.	23/10/2026

G/TBT/N/CZE/269 23/09/2026	Czech Republic	<i>A measure of a general nature laying down metrological and technical requirements for specified measuring instruments, including test methods for type approval, verification and checking of specified measuring instruments Metrology and measurement. Physical phenomena (ICS code: 17); (ICS code 17.020 - Metrology and measurement in general)</i> General Measure No 0111-OOP-C106-26 – metrological and technical requirements for the type approval, verification and testing of specified measuring instruments: 'measuring systems for determining the energy value of energy gases and their mixtures'; The regulation lays down the metrological and technical requirements for these specified measuring instruments, including the test methods for type approval and verification of specified measuring instruments. Measuring systems for determining the energy value of energy gases and their mixtures may be placed on the market and put into use in the Czech Republic as specified measuring instruments pursuant to Act No 505/1990 on metrology, as amended. Pursuant to this Act, specified measuring instruments are instruments that are included in the list of the types of specified measuring instruments (Decree No 345/2002) and, at the same time, intended (by the manufacturer/importer) for measurements relevant to the protection of public interests in consumer protection, contractual relations, imposition of sanctions, fees, tariffs and taxes, health protection, environmental protection, occupational safety, or the protection of other public interests protected by special legislation. This is therefore a purpose similar to the one defining specified products – non-automatic measuring instruments and scales pursuant to Directives 2014/31/EU and 2014/32/EU. The requirements of this legislation do not apply to measuring instruments not placed on the market in the Czech Republic for the above purposes, defined by Act No 505/1990 on metrology, as amended. The purpose of this notified legislation is to lay down metrological and technical requirements for these specified measuring instruments. This legislation also stipulates tests for type approval and verification of specified measuring instruments of this type. This measure of a general nature has been drawn up with a view to achieving the specified objective, whilst taking the greatest possible account of international standards and other generally accepted principles and norms. Act No 505/1990 on metrology assumes that, for the types of specified measuring instruments listed in the Annex to Decree No 345/2002 laying down the measuring instruments subject to mandatory verification and those subject to type approval, the technical and metrological requirements,	11/11/2026

including tests for the purposes of type approval, verification and checking of specified measuring instruments, shall be specified in a measure of a general nature. Given the intended purpose, the stipulated requirements are designed to be as minimal as possible. Moreover, from the manufacturer's point of view, they replicate the usual requirements of normative regulations for products. For manufacturers or users, the type-approval or verification process simply involves demonstrating that the relevant requirements have been met. In addition, the manufacturer does not necessarily have to undergo all the tests at the time of type-approval, if they have already been carried out. The general principle of recognition applies where the requirements are met.

Waste, as defined in Directive 2008/98/EC of the European Parliament and of the Council on waste. 22/11/2026

Proposal for a Commission Delegated Regulation supplementing Regulation (EU) 2024/1157 of the European Parliament and of the Council by establishing a list of countries to which the OECD Decision does not apply and to which exports of certain non-hazardous wastes and mixtures of non-hazardous wastes from the Union for recovery are authorised.;

Regulation (EU) 2024/1157 on shipments of waste (Article 41) introduced a prohibition on the export of non-hazardous waste from the EU to non-OECD countries, which will enter into force on 21 May 2027. The Regulation also provides for the possibility to derogate from this prohibition for countries that have applied to be included in a list (established by the European Commission) and that have demonstrated the exported waste will be managed in an environmentally sound manner in their territory, with human health, climate and environmental protection requirements equivalent to those of the EU. Article 42 and Annex VIII of the Regulation lay down the application procedure and the information the countries needed to provide in their application. The European Commission assessed the applications and proposes this draft Delegated Regulation to establish the list of countries to which the OECD Decision does not apply and to which exports of non-hazardous wastes and mixtures of non-hazardous wastes from the Union for recovery are authorised, in accordance with Article 41.

All food (ICS:67), Food preparations for use by infants or young children (HS Code: 2106.90.73 00) 22/11/2026

Amendments to Regulation 391 and deletion of Table I and Table II of the Twenty-Third Schedule of the Food Regulations 1985 [P.U. (A) 437/1985];

The proposed amendments to Regulation 391 of the Food Regulations 1985 [P.U.(A) 437/1985] are as follows:

1. subregulations 391(3) to 391(6) are to amend the term "processed cereal based food" to "processed cereal-based food";
2. subregulations 391(8)(a) and 391(8)(b) are to amend the amount of added carbohydrates from sucrose, fructose, glucose, glucose syrup or honey to products mentioned in subregulations 391(1)(c)(i), 391(1)(c)(ii) and 391(1)(c)(iv);

3. subregulation 391(9) is to substitute the word "lipid" with "fat";
4. subregulation 391(14) is to delete provisions relating to food additives and to insert provisions on flavourings in processed cereal-based foods for infants and young children;
5. subregulation 391(15) is to delete provision on food conditioner in processed cereal-based foods for infants and young children;
6. subregulation 391(17)(b)(i) is to amend nutrition labelling in processed cereal-based foods for infants and young children;
7. subregulation 391(21) is to delete provision on contaminants in processed cereal-based foods for infants and young children;
8. Table I of the Twenty-Third Schedule is to delete the list of permitted food additives and its maximum level in processed cereal-based foods for infants and young children; and
9. Table II of the Twenty-Third Schedule is to delete the list of permitted food additives in processed cereal-based foods for infants and young children.

G/TBT/N/UKR/410 24/09/2026	Ukraine	<i>Medicines</i> Draft Law of Ukraine "On Amendments to Certain Laws of Ukraine Concerning the Regulation of the Circulation of Medicines"; The draft Law proposes to amend the legislation of Ukraine in the field of medicines, including the Laws of Ukraine "On Medicines" and "On Administrative Services", in order to establish a new regulatory model while ensuring	23/11/2026

continuity of relevant state functions and preventing interruptions or undue delays in procedures in the field of medicinal products.

The amendments to the Law of Ukraine "On Medicines", in particular, concern:

shortening the overall timeframe for a decision on the state registration (re-registration) of a medicinal product or refusal of such registration (re-registration) from 210 to 180 calendar days;

improving the provisions concerning the demonstration of bioequivalence of generic medicinal products;

improving the legal framework for clinical trials of medicinal products, including through scientific consultations for applicants on clinical trial-related matters and establishing statutory limits on the cost of the relevant services;

expanding the Bolar exemption by allowing the necessary studies, trials, assessments and other activities required for the state registration of a medicinal product, health technology assessment, state price regulation, reimbursement and preparation for participation in public procurement procedures before the expiry of the relevant patent or supplementary protection certificate (SPC), without allowing the placing on the market or commercial use of the respective medicinal product before the expiry of the relevant intellectual property right;

improving the pharmacovigilance system by regulating the submission and assessment of Periodic Safety Update Reports (PSURs) for medicinal products registered in Ukraine, implementing the European Union Single Assessment (PSUSA) procedure, and introducing the assessment of post-authorisation safety study (PASS) protocols and substantial amendments thereto;

improving the legal regulation of pharmacy and hospital pharmacy activities and state regulation of prices for medicinal products, including by ensuring the functioning of the National Price Catalogue and improving the mechanisms for the declaration and review of prices for medicinal products;

improving mechanisms for responding to risks of shortages of medicinal products and ensuring continuity of their supply through special measures in circumstances that may affect the availability of medicinal products;

improving transitional provisions concerning medicinal products registered before the entry into force of the new legislation and clinical trials authorised before the entry into force of the Law, including by maintaining the possibility of placing on the market medicinal products registered under the legislation previously in force for the period specified by the transitional provisions, and allowing the completion of clinical trials authorised before the entry into force of the Law.

The draft Law also proposes to amend the Law of Ukraine "On Administrative Services" in order to exclude relations in the field of state regulation of the circulation of medicinal products from its scope.

Requirements for Preserved Tuna and Bonito" of 9 July 2026;

The Order approves the Requirements for preserved tuna and bonito, which establish standards governing the placing on the market of preserved tuna (*Thunnus*) and bonito (*Bonito*) to ensure adequate consumer information and prevent business practices that mislead consumers.

The Requirements establish conditions for the use of food names, specify the fish species that may be used for tuna and bonito, and prohibit the mixing of different fish species in one package unit, except in the case of products of culinary preparation containing a specified minimum content of tuna, bonito or their mixture. They also establish requirements for the forms of presentation of the products and for the liquid medium used in preserved products, including requirements for the corresponding designations in the name of the food product. The name of the food product must comply with the established requirements and, as applicable, include the fish species, the form of presentation and a description of the liquid medium. The simultaneous use of the names "tuna" and "bonito" in the name of the food product is prohibited. The Requirements also establish minimum fish content depending on the form of presentation and the liquid medium used.

The Order provides that preserved tuna and bonito that comply with the legislation on food safety and certain quality parameters applicable before the entry into force of this Order, but do not comply with all or certain provisions of the Requirements for preserved tuna and bonito approved by this Order, may remain on the market until the expiry of their minimum durability date or use-by date.

Fire prevention, firefighting and rescue equipment, including: Fire pumps (HS 8413.19.10; 8413.19.20) Common firefighting equipment: delivery hoses, portable/wheeled fire extinguishers, self-activating extinguishers (HS 5909.00.10; 8424.10.90) Fire extinguishing media: dry powder, CO₂, foam concentrate, clean/gaseous agents (HS 3813.00.00) Fire detection and alarm system equipment: control panels, detectors, manual call points, video detectors (HS 8537.10.99; 8531.10.20; 8531.10.30; 8531.90.90) Gas, aerosol and powder extinguishing system equipment: cylinders, valves, nozzles, aerosol extinguishers (HS 8424.10.90; 8424.90.99) Water-based, water-mist and foam extinguishing system equipment: sprinklers, alarm valves, deluge valves, fire hydrants (HS 8424.90.99; 8481.40.90) Emergency exit signs and emergency lighting (HS 9405.11.99; 9405.19.92; 9405.19.99; 9405.61.90; 9405.69.90)

23/11/2026

Draft QCVN 03:2026/BCA – National technical regulation on Fire protection and Rescue equipment;

This draft national technical regulation specifies mandatory technical requirements, test methods and sample specifications for fire prevention, firefighting and rescue equipment.

The draft applies to equipment manufactured, assembled, imported, traded and used in Viet Nam (Section 1.1) — unlike the previously notified draft (G/TBT/N/VNM/400), imported equipment is now within the mandatory scope of this regulation.

The draft sets out a conformity assessment mechanism — certification of conformity, declaration of conformity, and post-market surveillance — for equipment classified as medium- or high-risk under the list issued by the Ministry of Public Security, replacing the circulation permit mechanism under the previously notified draft. It further sets out requirements on sampling, testing, labelling and traceability. This draft applies to: (1) organizations and individuals manufacturing, assembling, importing, trading in and using the equipment; (2) conformity assessment bodies; (3) competent state management authorities. The first draft of QCVN 03:2026/BCA was notified under G/TBT/N/VNM/400 (23 April 2026). This notification concerns the second draft, which has been substantially revised — reducing the equipment covered from 85 types/865 technical criteria to 57 types/483 technical criteria, and replacing the circulation-permit management mechanism with conformity assessment, information declaration and post-market surveillance.

Purificador de Aire

24/11/2026

PROYECTO DE PROTOCOLO DE ANÁLISIS Y/O ENSAYOS DE SEGURIDAD DE PRODUCTO ELÉCTRICO PE N°1/45:2026: Purificador de Aire;

El presente protocolo establece los requerimientos del procedimiento de certificación de Seguridad para el producto Purificador de Aire (aparatos eléctricos de depuración de aire) para usos domésticos y análogos, de alimentación eléctrica monofásica no superior a 250 V de c.a., incluyendo aparatos de corriente continua (CC) y aparatos que funcionan con baterías. El presente Protocolo de Ensayos no aplica a los siguientes artefactos:

- Aparatos de depuración de aire donde se emita intencionadamente radiación nociva desde el aparato;
- Aparatos destinados exclusivamente a fines industriales;
- Aparatos destinados a ser utilizados en lugares donde prevalezcan condiciones especiales, como la presencia de una atmósfera corrosiva o explosiva (polvo, vapor o gas);
- Sistemas de depuración de aire incorporados en la estructura del edificio;
- Aparatos para fines médicos (serie IEC 60601).

Veterinary medicinal products

25/10/2026

Draft Order of the Ministry of Agrarian Policy and Food of Ukraine "Certain Issues Regarding the Retail of Veterinary Medicinal Products at a Distance";

The draft Order provides for the approval of the graphic design of the logo used to identify a veterinary medicinal product market operator authorised to retail veterinary medicinal products at a distance, the technical requirements for the graphic design of the logo and the procedure for its use.

The technical requirements specify the colour values for reproducing the logo, the placement and technical description of the State Flag of Ukraine as part of the logo, the colour values for reproducing the State Flag of Ukraine, the requirements concerning the language of the text displayed on the logo, and the minimum width of the logo.

The procedure for the use of the logo requires a two-way link between the website of a veterinary medicinal product market operator authorised to retail veterinary medicinal products at a distance and the relevant webpage on the official website of the licensing authority listing the operators authorised to retail veterinary medicinal products at a distance.

The draft Order also provides for the approval of a graphic representation of the logo for use on a coloured background.

Steel products and goods

25/10/2026

Draft Decree on steel quality management;

1. This draft Decree prescribes specific quality management requirements for steel products and goods in production, importation, and market circulation; post-market quality inspection of steel at the source; and the responsibilities of relevant agencies, organizations, and individuals.

2. Issues concerning the classification of products and goods based on risk levels; declaration of applicable standards; conformity assessment; declaration of conformity with standards and technical regulations; registration, designation, and recognition of conformity assessment bodies; state inspection of quality; exemption from, reduction of, or intensified inspection; labeling; and the issuance of warnings regarding, recall, and handling of non-conforming products and goods shall be implemented in accordance with the law on standards and technical regulations, the law on product and goods quality, and other relevant laws, except where this Decree provides specific regulations.

3. This draft Decree applies to:

- Organizations and individuals that manufacture, import, or trade in steel products, as well as other organizations and individuals participating in the steel product supply chain in Vietnam.
- Conformity assessment bodies and accreditation bodies with activities related to steel products.

- State management agencies, state inspection agencies for product and goods quality, customs authorities, market surveillance agencies, and other relevant specialized agencies.
- Other agencies, organizations, and individuals involved in steel quality management.
