This rulemaking proposes to: restrict the use of hydrofluorocarbons in specific sectors or subsectors in which they are used; establish a process for submitting technology transitions petitions; establish recordkeeping and reporting requirements; and address certain other elements related to the effective implementation of the American Innovation and Manufacturing Act. The proposed restrictions on the use of hydrofluorocarbons would, in part, address petitions granted on 7 October 2021, and 19 September 2022. The U.S. Environmental Protection Agency is also seeking advance information on certain topics that may be helpful to developing a future proposed rule including on restrictions on the use of hydrofluorocarbons for certain other sectors and subsectors and on a third-party auditing program to verify substances used in products.</p>	30/01/2023

n-Methylpyrrolidone (NMP); Revision to Toxic Substances Control Act (TSCA) Risk Determination; Notice of Availability;

Notice -The Environmental Protection Agency (EPA) is announcing the availability of the final revision to the risk determination for the [n-methylpyrrolidone \(NMP\) risk evaluation](#) issued under the [Toxic Substances Control Act \(TSCA\)](#). The revision to the NMP risk determination reflects the announced policy change. The revision to the NMP risk determination reflects the announced policy changes to ensure the public is protected from unreasonable risks from chemicals in a way that is supported by science and the law. EPA determined that NMP, as a whole chemical substance, presents an unreasonable risk of injury to health when evaluated under its conditions of use. In addition, this revised risk determination does not reflect an assumption that workers always appropriately wear personal protective equipment (PPE). EPA understands that there could be adequate occupational safety protections in place at certain workplace locations; however, not assuming use of PPE reflects EPA's recognition that unreasonable risk may exist for subpopulations of workers that may be highly exposed because they are not covered by Occupational Safety and Health Administration (OSHA) standards, or their employers are out of compliance with OSHA standards, or because many of OSHA's chemical-specific permissible exposure limits largely adopted in the 1970's are described by OSHA as being "outdated and inadequate for ensuring protection of worker health," or because OSHA has not issued a chemical-specific permissible exposure limit (PEL) (as is the case for NMP), or because EPA finds unreasonable risk for purposes of TSCA notwithstanding OSHA requirements. This revision supersedes the condition of use-specific no unreasonable risk determinations in the December 2020 NMP Risk Evaluation and withdraws the associated TSCA order included in the December 2020 NMP Risk Evaluation.

Canada

Drugs and medical devices (ICS codes: 11.120, 11.040)

27/03/2023

Regulations Amending Certain Regulations made under the Food and Drugs Act (Agile Licensing);

Health Canada is proposing new targeted provisions and regulatory amendments to the Food and Drug Regulations and Medical Devices Regulations that would deliver on the Department's modernization commitments and leverage long-standing policies and practices. The proposal would take into account recent experience with regulatory agencies successfully piloted through the COVID-19 interim orders and their transition to regulations. This proposal is comprised of distinct components that would:

- Enable the use of terms and conditions on the drug identification number of any drug;
- Broaden the scope of use of terms and conditions for Class II, III, and IV medical devices;
- Require risk management plans for certain human drugs to manage risks and uncertainties;
- Allow for the option of a rolling review for certain drug submissions, including those for drugs intended to address a public health emergency;

- Extend modified requirements and prepositioning that apply to COVID-19 drugs to other drugs needed to address future public health emergencies;
- Clarify expectations that a drug be fabricated, packaged/labelled, tested and stored, including during transportation, in a manner that assures its quality;
- Modernize requirements for biologics by repealing outdated requirements and replacing them with those that reflect current practices;
- Clarify, in regulation, the authority to consider certain information obtained outside of a new drug submission to support Health Canada's examination of that submission for a new drug;
- Require manufacturers to submit human clinical trial data broken down by population sub-groups (disaggregated data) for new and supplemental human drug submissions, as submitted to the United States Food and Drug Administration or the European Medicines Agency; and
- Update requirements respecting standards for labelling and requirements for those that claim a manufacturer's standard for their drug.

Malaysia

The user equipment that are intended for use in connection with IMT Advanced (Long Term Evolution) public mobile telecommunications service which may include, but not limited to, cellular mobile terminals, handheld, portable and vehicle-mounted equipment, and Radio Frequency (RF) interface cards and modems. Telecommunication systems (ICS:33.040)

19/02/2023

IMT-Advanced (Long Term Evolution) -User Equipment (First revision) (MCMC MTSFB TC T015:2022);

This Technical Code was developed for the purpose of certifying communications equipment under regulation 14 of the Communications and Multimedia (Technical Standards) Regulations 2000 [P.U.(A) 124/2000].

This technical code specifies the minimum requirements for user equipment (UE) that are intended for use in connection with IMT-Advanced (Long Term Evolution) public mobile telecommunications service in Malaysia. The UE may include, but not limited to, cellular mobile terminals, handheld, portable and vehicle-mounted equipment, and Radio Frequency (RF) interface cards and modems.

This technical code applies to IMT-Advanced (Long Term Evolution) User Equipment (4G UE) based on the technologies as specified in applicable Malaysian Standards, technical codes, international standards, ITU Recommendations and its radio regulations as agreed and adopted by Malaysia.

Fish and fishery products and canned meat and fish products
Agreement on mutual recognition of conformity assessment procedures between Namibia and South Africa (Namibian Standards Institution (NSI)) and (National Regulatory for Compulsory Specification of South Africa (NRCS)

This agreement between NSI and NRCS for arrangements in regard to Inspection of fish and fishery products and canned meat and fish products and for Legal Metrology matters. It is inclusive of cooperation in the areas of consumer protection, food safety, conformity, and regulatory assessment in the promotion of trade. Recognition of each other's certification, certification marks of conformity for trading purposes. Allows the parties to facilitate or undertake on behalf of one another, or jointly any pre-shipment inspection of designated products traded between the two countries.

Discussion paper: Multipurpose ladders –Transitioning to a new safety standard 14 pages in English (14 page(s), in English) to be provided separately. Australian Standard: AS 1892.1:2018

<https://store.standards.org.au/product/as-1892-1-2018>

A multipurpose ladder is a portable ladder with joints which allow it to be folded and rearranged to function as a single-or double-sided ladder, or other configurations. Since November 2012, the sale, supply or importation of multipurpose ladders which do not comply with official standards has been prohibited due to injuries attributable to structural and stability failures.

Multipurpose ladders are currently regulated under the 'Unsafe Goods Notice (Multipurpose Ladders) 2021' (the Notice), enabling the sale, support and importation of ladders in compliance with Australian Standard, AS 1892.1:2018 Portable ladders, Part 1: Performance and geometric requirements (the 2018 Standard), or Australian and New Zealand Standard, AS/NZS 1892.1:1996 (the 1996 Standard). The Notice was intended as a transitional notice allowing for industry to sell old stock that was tested against the 1996 Standard and is due to expire on 5 April 2023.

The proposed measure will replace the existing Notice by establishing new regulations under section 29 of the Fair-Trading Act to require all multipurpose ladders to comply with the existing 2018 Standard. The existing 2018 Standard will supersede the 1996 Standard with the aim of providing a greater level of protection to users of multipurpose ladders. Key differences between the existing 2018 and 1996 standard include:

1.1 test report requirements to standardise the type of documentation required to substantiate compliance with the regulations.

1.2 labelling requirements which are clearer and significantly more prescriptive, including new warnings about misuse and electrical hazards, and requirements for larger fonts and higher contrast;

1.3 the 'higher stability' categorisation uses stability test procedures involving higher forces than the standard stability requirements;

1.4 work platform and step stool requirements.

Almost all multipurpose ladders on the New Zealand market already comply with the existing 2018 standard. Those that do not are expected to comply by April 2023.

This proposal would require multipurpose ladders sold in future to comply with AS 1892.1:2018. An alternative would be to continue allowing both the Previous Standard and the Current Standard.
