<a href="#">G/SPS/N/CAN/1446</a> 25/07/2022	Canada	<p><i>Extend the use of certain solvents to non-flavouring extracts (ICScode: 67.220.20)</i></p> <p><b>Notice of Modification to the List of Permitted Carrier or Extraction Solventsto Extend the Use of Certain Solvents to Non-flavouring Extracts.</b></p> <p>From time to time, Health Canada may make modifications to the Lists of Permitted Food Additives, to align the lists with amendments of Part B of the Food and Drug Regulations(Regulations).Health Canada published the Regulations Amending the Food and Drug Regulations and the Cannabis Regulations (Supplemented Foods)in the Canada Gazette, Part II creating a regulatory framework for the sale of supplemented foods in Canada. As a result, Health Canada modified the List of Permitted Carrier or Extraction Sovlentsto extend the use of certain solvents to the manufacture of non-flavouring extracts, caffeine extracts, or both, that may be used as ingredients in supplemented foods. This modification is effective 21July 2022.The purpose of this communication is to publicly announce the Department's decision in this regard and to provide the appropriate contact information for inquiries or feedback on this modification.</p>	03/10/2022

<a href="#">G/SPS/N/UGA/201</a> 25/07/2022	Uganda	<p><i>Animal or vegetable fertilizers, whether or not mixed together or chemically treated; fertilizers produced by the mixing or chemical treatment of animal or vegetable products (HS code(s): 3101); Fertilizers (ICS code(s): 65.080)</i></p> <p><b>DUS 1576: 2022, Biofertilizers —Specification, Second Edition.</b></p> <p>This Draft Uganda Standard specifies requirements, sampling and test methods for biofertilizers. This standard does not include requirements for conventional chemical fertilizers. Biofertilizers are products containing carrier based (solid or liquid) living microorganisms which are agriculturally useful in terms for instance of nitrogen fixation, phosphorus solubilisation or nutrient mobilization, to increase the productivity of the soil and/or crop. Biofertilizers are most commonly referred to the use of soil microorganisms to increase the availability and uptake of mineral nutrients for plants. Whether the existence of a microorganism increases the growth of plants by making nutrients more available or replacing soil nutrients or increasing plant access to nutrient, as long as the nutrient status of the plant has been enhanced by the microorganisms, the substance that was applied to the plant or</p>	23/09/2022

soil containing the microorganisms, can be characterized as a biofertilizers. Biofertilizers, known as microbial products, act as nutrient suppliers and soil conditioners that lower agricultural burden and conserve the environment. Good soil condition is imperative to increased crop production, as well as human and/or animal health welfare. Thus, the materials used to sustain good soil condition, are treated as environmental matters. However, there are still some problems to be met on the use of microbial products. More precise quality control must be made in favour of the customers. With this in mind, we will do our best to develop better production techniques and to improve the management system for microbial products. Although the effects of biofertilizers are different among nations due to variances in climate and soil conditions, the importance of biofertilizers on environmental conservation in the 21st century must not be ignored. In the same manner, various biotechnologies should be accepted for increasing the biofertilizers effects with concern for the environment.

**DUS 2664: 2022, Poultry and poultry products —Pickled eggs — Specification, First Edition.**

This Draft Uganda Standard specifies the requirements, sampling and test methods for pickled eggs for direct human consumption, including for catering purposes or for repackaging if required. Pickling is a process of preserving perishable food in vinegar and/or oil with added spices, salt and condiments in the form of a ready to eat product. Egg pickle is a comparatively new product. Egg pickle can be prepared from chicken, duck or quail eggs, depending on their availability and acceptability. Egg pickle is novel food product having a relatively long shelf life at ambient temperature. Egg pickling is the process of preserving hard cooked egg in vinegar and/oil with added spices, salt and condiments in the form of ready to eat product. The egg pickle has advantage over other methods of eggs preservation as it does not require refrigeration or freezing conditions during storage and its spicy sensory characteristics make it desirable to the consumers. Pickles occupy an important place among the traditional food processed in a number of countries in the world. With the increasing popularity of eggs and egg products, there is a good scope for the utilisation of eggs in the form of pickle. Technological details pertaining to the process of pickled eggs have been worked out with a view to offer such nutritious, ready-to-eat product to the consumers. Note: This Draft Uganda Standard was also notified to the TBT Committee.
